USPA Webinar

August 28, 2021

**What you should know
about the coming 5G and
*what to do about it***

Andrew Michrowski

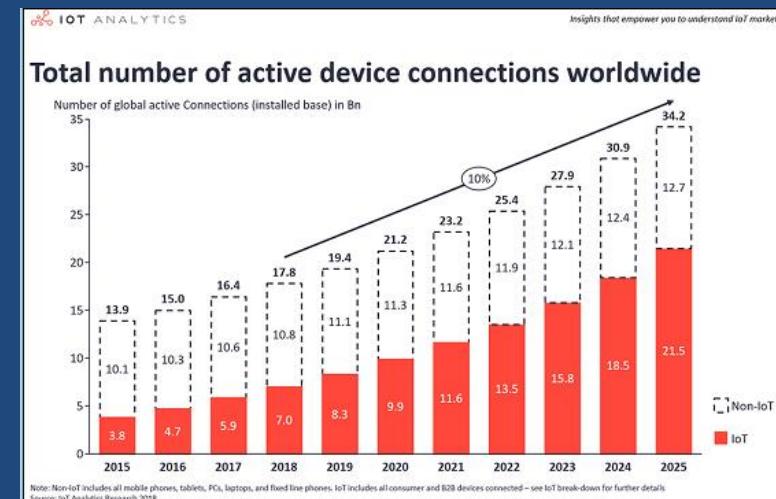

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

Our background microwave hash

*Comparing **light** and **microwave** emissions (from smart meters, Wi-Fi, cellphones). With **5G**, this hash may **increase another 100X or more.***

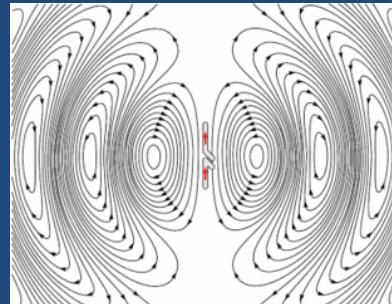

Internet of Things will use microwaves than **people** as of 2021

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

Man-made *signalling* is **POLARIZED**.
NEW to living systems

Natural *emissions* are **NON-POLARIZED**

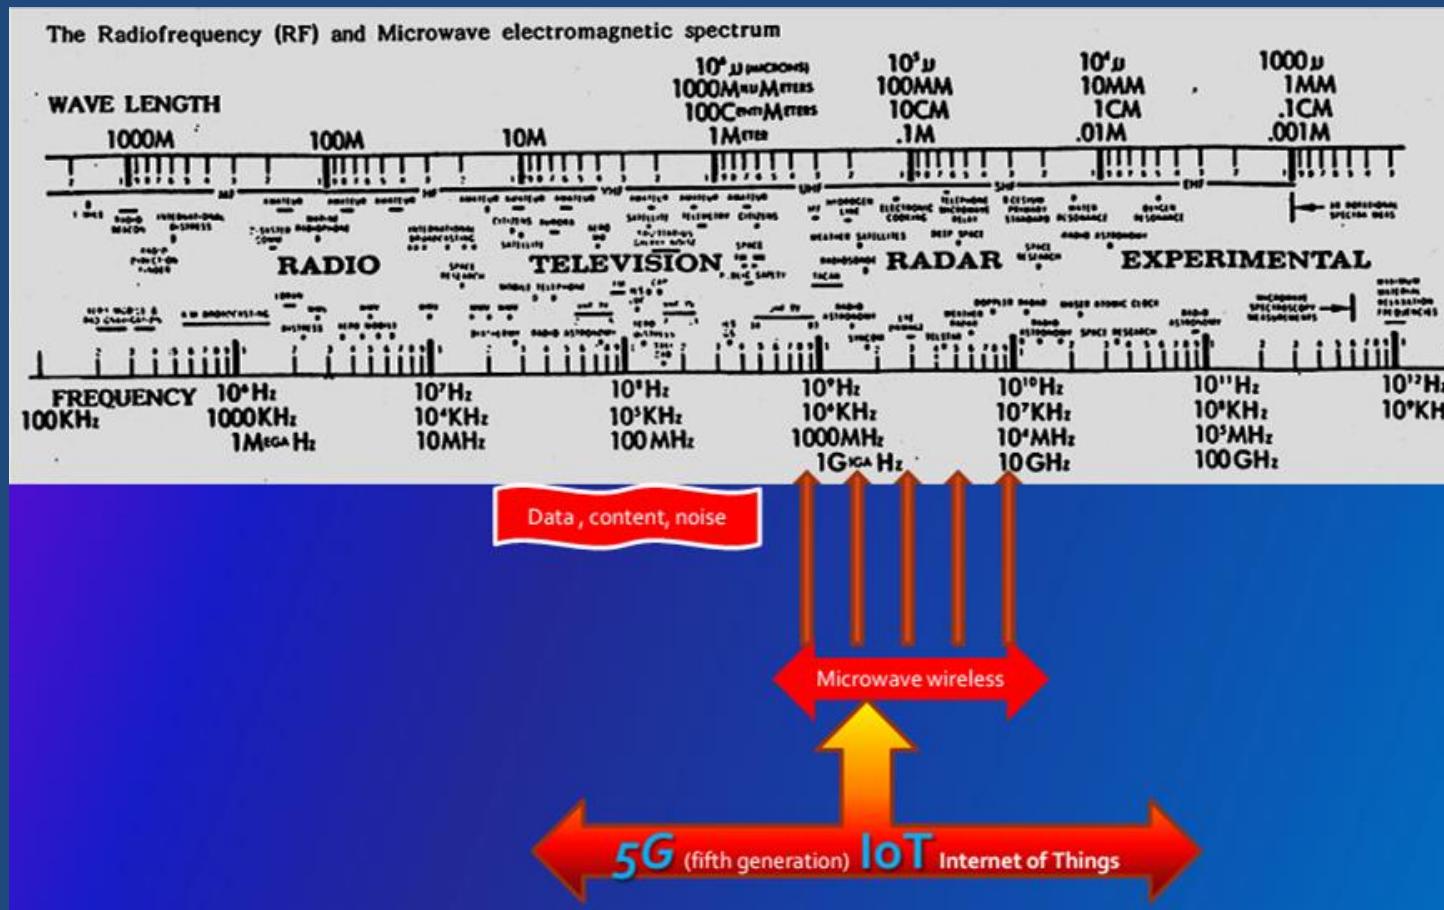

Adapted by living systems

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

Interoperability of bandwidths – 5G and their adverse bioeffects windows

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

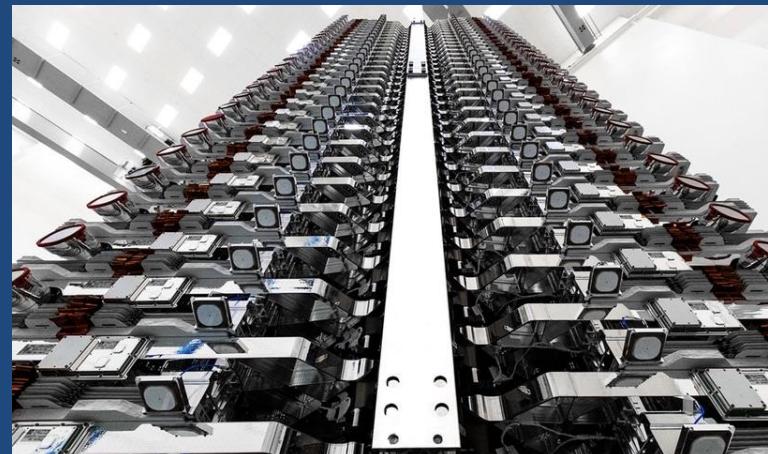

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G's 60,000 satellites

42,000 from **SpaceEx**, planned in low & medium orbits, focusing & steering microwaves up to 5,000.000 Watts from phase-array antennas.

Located in Magnetosphere - therefore of significant influence over atmosphere's electrical properties.

Modification of Earth's electromagnetic environment may be an even greater threat to life than radiation from ground-based antennas.

SpaceEx Starlink
Satellites ready for launch

What you should know about the coming 5G – and what to do about it

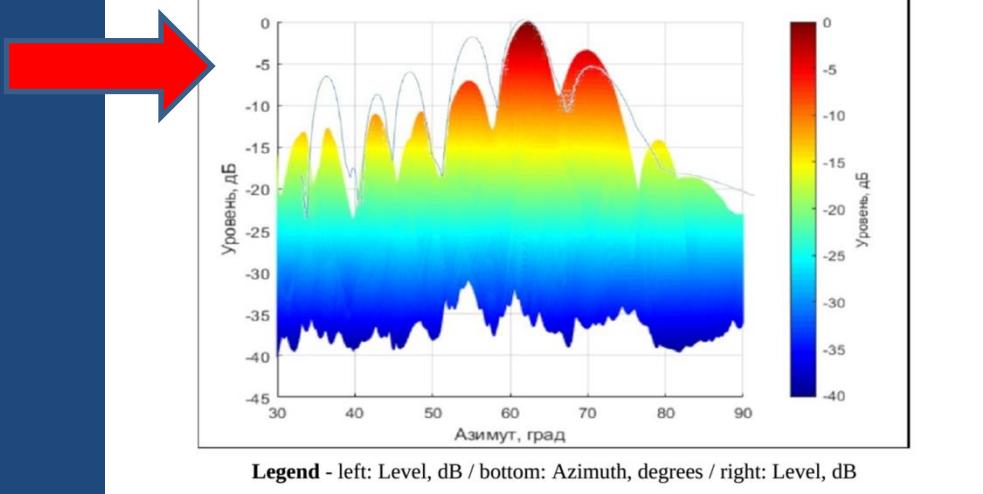

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G trials & actual emissions differ in their effects on the atmosphere

red coloured levels constitute excess of real signal density over that projected from trials

interference

World Radiocommunication Conference (WRC-19) Sharm el-Sheikh, Egypt, 28 Oct – 22 Nov 2019 – submission from the Russian Federation

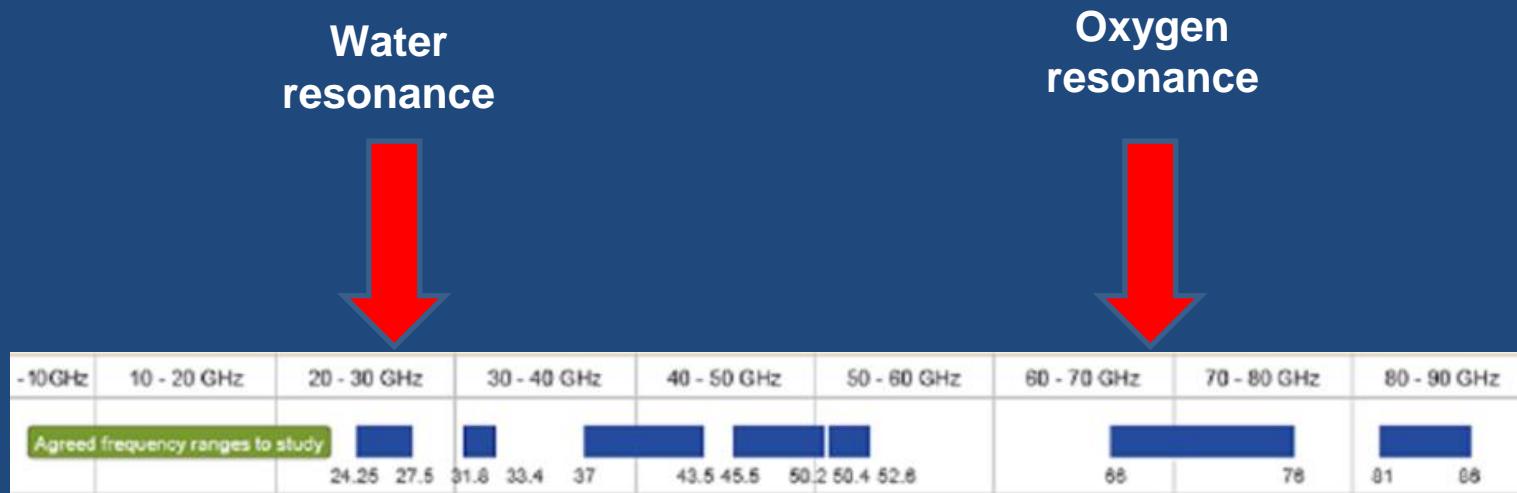

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

The additional 5G's multiple bands –

New, un-assessed environmental effects on water & Oxygen

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G's effects on weather monitoring

“... accuracy of [weather] data collected may only become apparent in few years ... if interference occurs, it will be irreversible.”

World Radiocommunication Conference (WRC-19) Sharm el-Sheikh, Egypt, 28 Oct – 22 Nov 2019

World Meteorological Organization (WMO) submission

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

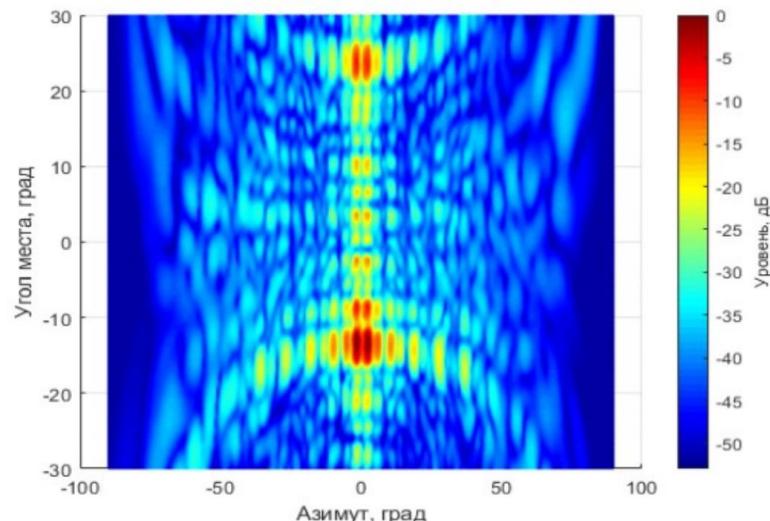

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G infrastructure microwave hash - satellites

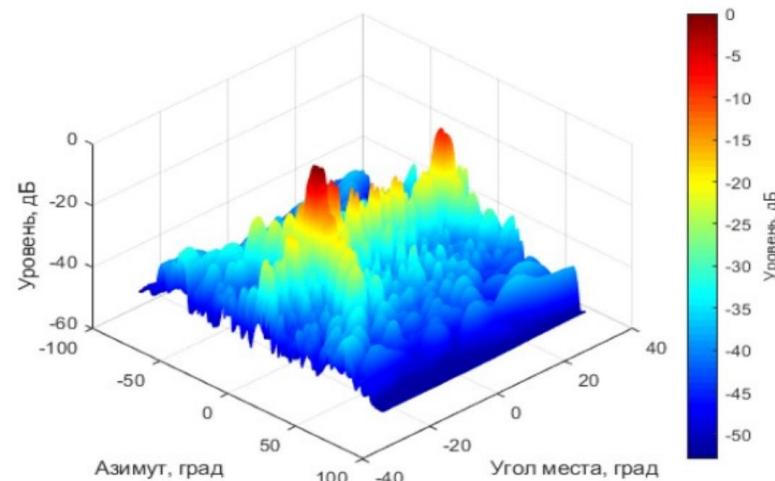

Multibeam “talk” patterns between “things” worldwide

3-D dimensional spatial patterns with potential for multi-dimensional interfaces of unknown significance to life

Radiation pattern in a Cartesian coordinate system (RAKURS 1)

Radiation pattern in a Cartesian coordinate system (RAKURS 2)

Legend - left: Elevation angle, degrees / bottom left: Azimuth, degrees / right: Level, dB

Legend - left: Level, dB / bottom left: Azimuth, degrees / bottom right: Elevation angle, degrees / right: Level, dB

What you should know about the coming 5G – and what to do about it

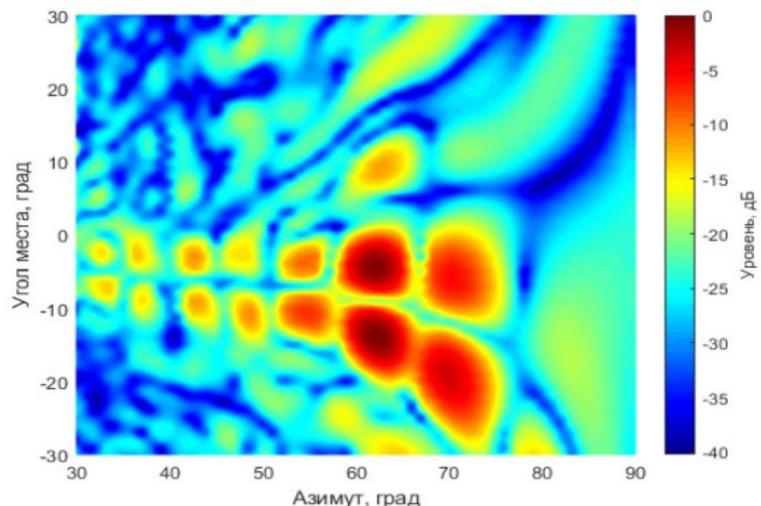

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

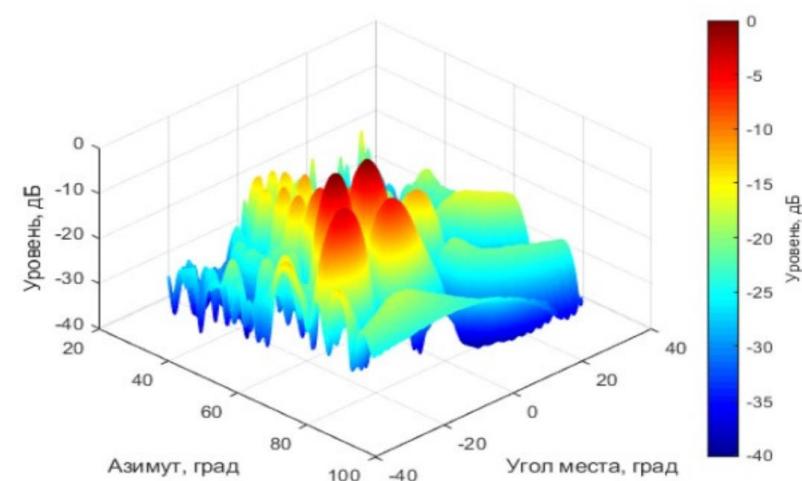

5G infrastructure microwave hash - antennae

Multibeam “talk” patterns between “things” worldwide

Antenna radiation pattern in a Cartesian coordinate system (RAKURS 1)

Antenna radiation pattern in a Cartesian coordinate system (RAKURS 2)

Legend - left: Elevation angle, degrees / bottom: Azimuth, degrees / right: Level, dB

Legend - left: Level, dB / bottom left: Azimuth, degrees / bottom right: Elevation angle, degrees / right: Level, dB

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G emissions exceed national exposure standards

Case of Poland (below). Elsewhere, standards are being lowered to permit technological feasibility - beyond body heating levels

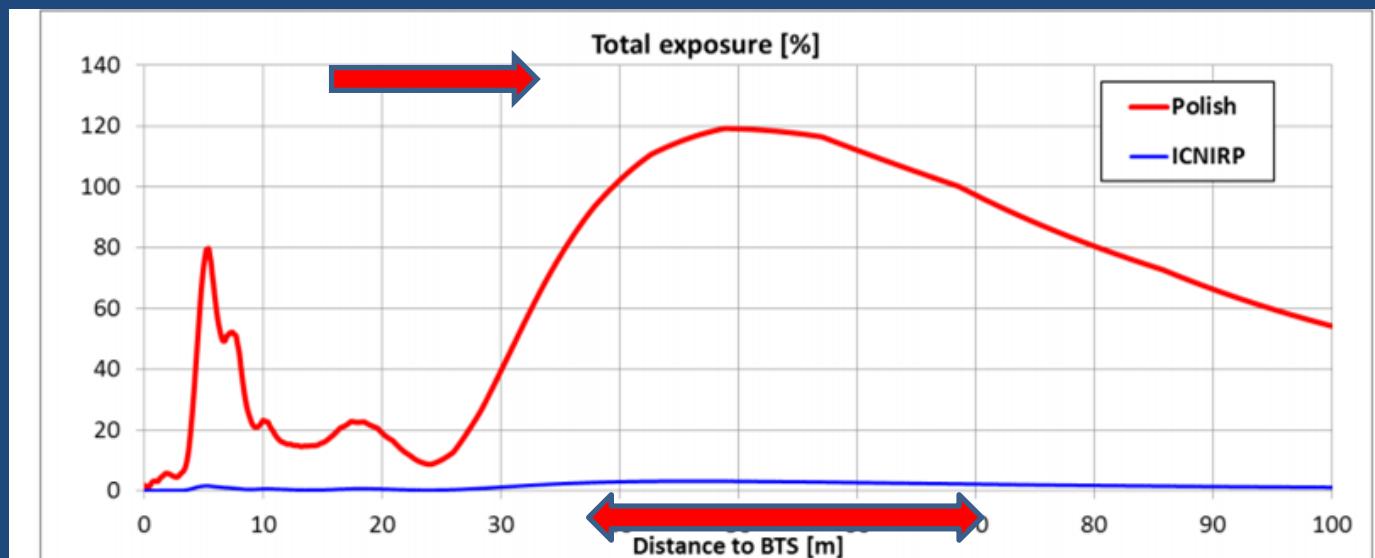

Figure 6 Total RF EMF exposure as a function of distance to the antenna tower, 9 m above terrain level; Polish exposure limits (red curve), WHO/INIRP exposure limits (blue curve)

Submission to **United Nations ITU** (standardisation sector) September 2019 from **Orange Polska**

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G exposure context

U.S. FCC rules permit 5G base station beams effective radiated power at 30,000 Watt per each 100 MHz of spectrum.

This allows 300,000 Watt / GHz of spectrum, or 1000 times more powerful than 2019 uses.

What you should know about the coming 5G – and what to do about it

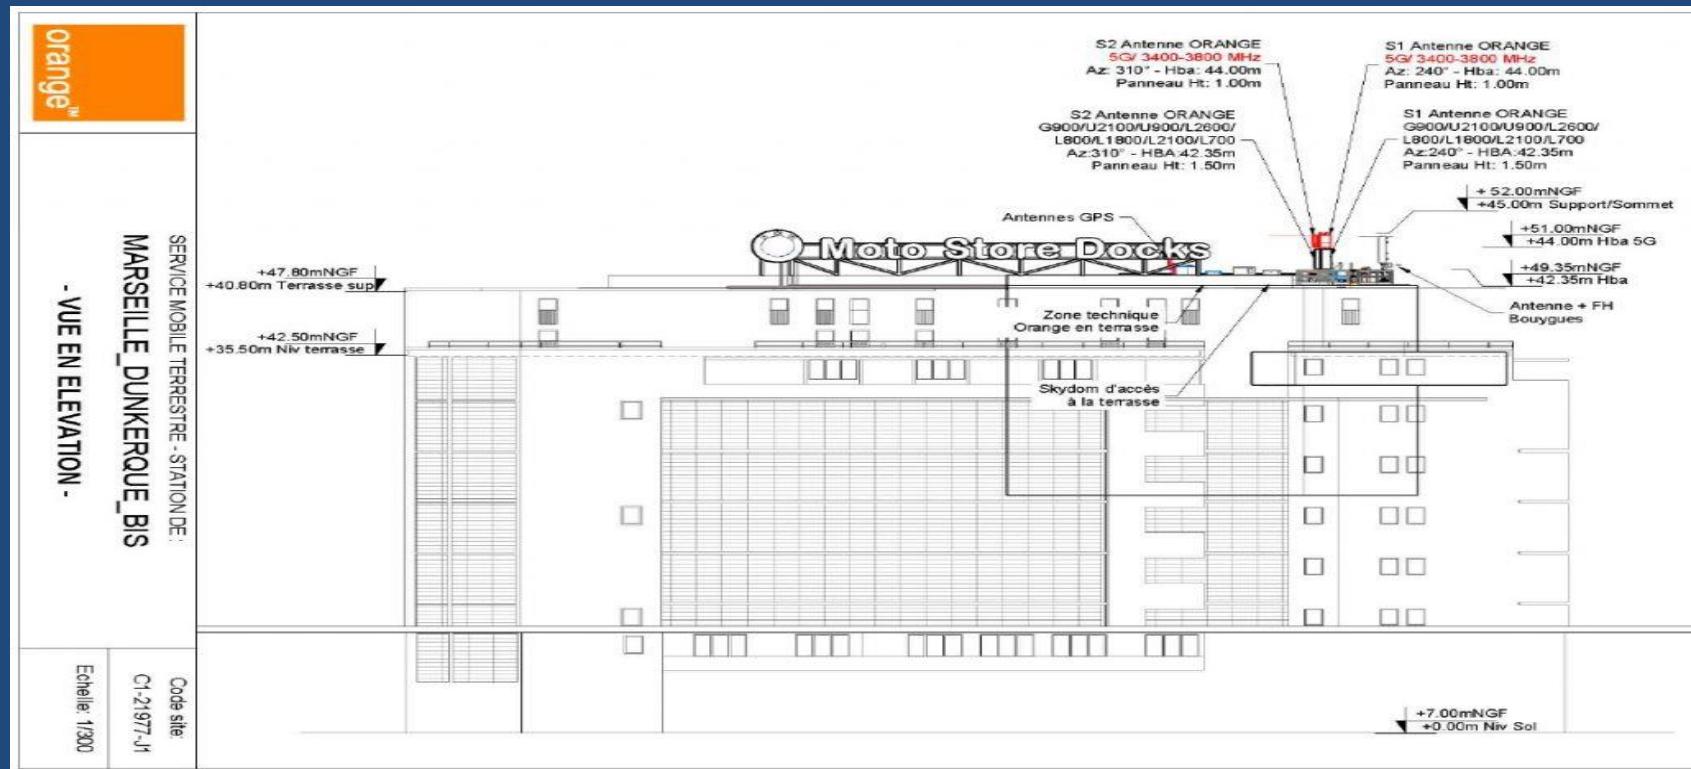

Andrew Michrowski

Microwave band wireless technologies increasing intensity

2019 roof-top transceivers Swiss analysis :

Total emissions from **2G / 3G /4G + 5G = 47,629 Watts**

5G emissions **double** sum of the all other transceivers. David Bruno

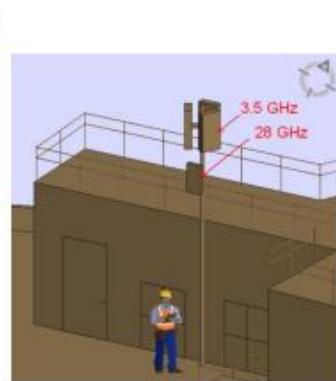

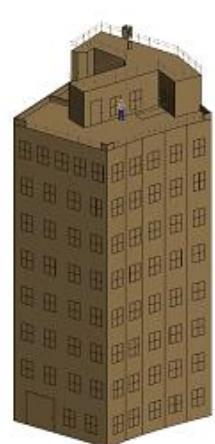

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

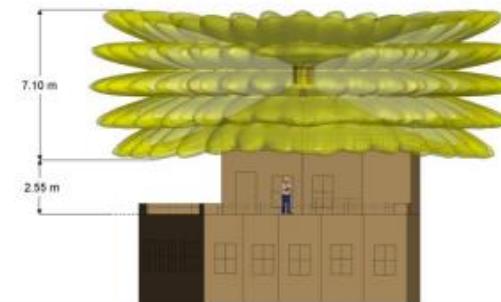

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

Comparing current & 5G's MIMO

Example: 5G site with massive MIMO 3.5 GHz and 28 GHz, actual maximum power

5G urban roof-top installation

Exclusion zone
10 W/m²
ICNIRP general public limit

Actual maximum power = 25% of theoretical maximum
RF EMF exposure below ICNIRP limits in public areas
Case study to be included in IEC TR 62669 (2018) and
ITU-T Supplement on 5G EMF compliance

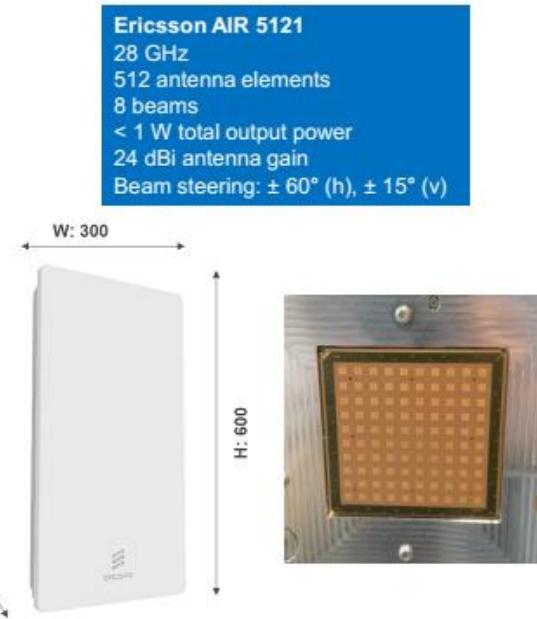

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G's MIMO (Ericsson AIR 5121) – exceeds Polish standard

28 GHz 5G massive MIMO small cell

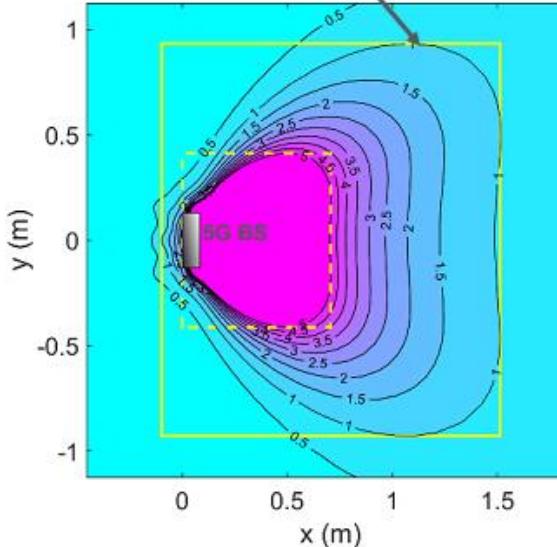

Ericsson AIR 5121
28 GHz
512 antenna elements
8 beams
< 1 W total output power
24 dBi antenna gain
Beam steering: $\pm 60^\circ$ (h), $\pm 15^\circ$ (v)

W: 300 H: 600 D: 90

Exclusion zone, 10 W/m²
(ICNIRP power density limit for the general public)

Computation assuming maximum power in all beam directions, TDD taken into account

ICNIRP limit compliance not an issue for normal installations – although larger exclusion zone than for 3G/4G
10x larger exclusion zone with 1/100 of ICNIRP – installations may be challenging

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

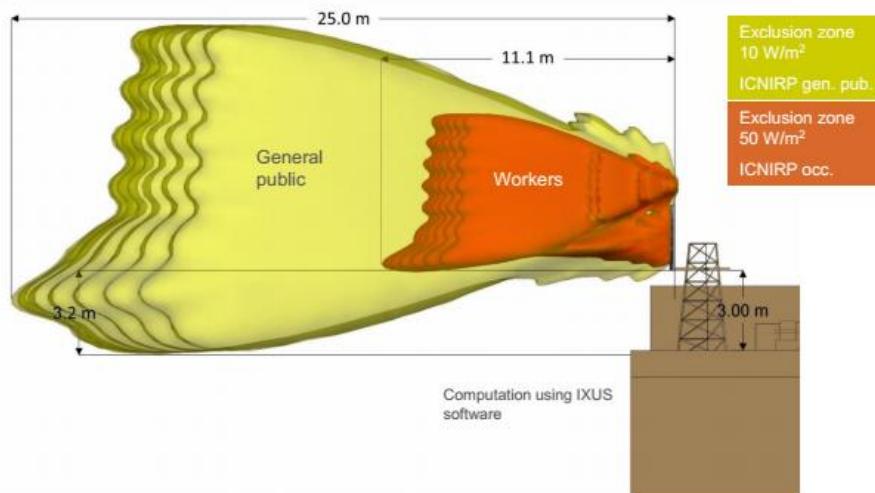

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G's MIMO – where standards exceed up to 25 metres away

3.5 GHz 5G site with massive MIMO

- 3.5 GHz, 200 W
- Massive MIMO (64 elements)
- EIRP of 72 dBm
- Installation on existing site with 2G, 3G and 4G antennas
- Theoretical maximum power (100% simultaneous utilization) assumed for all antennas

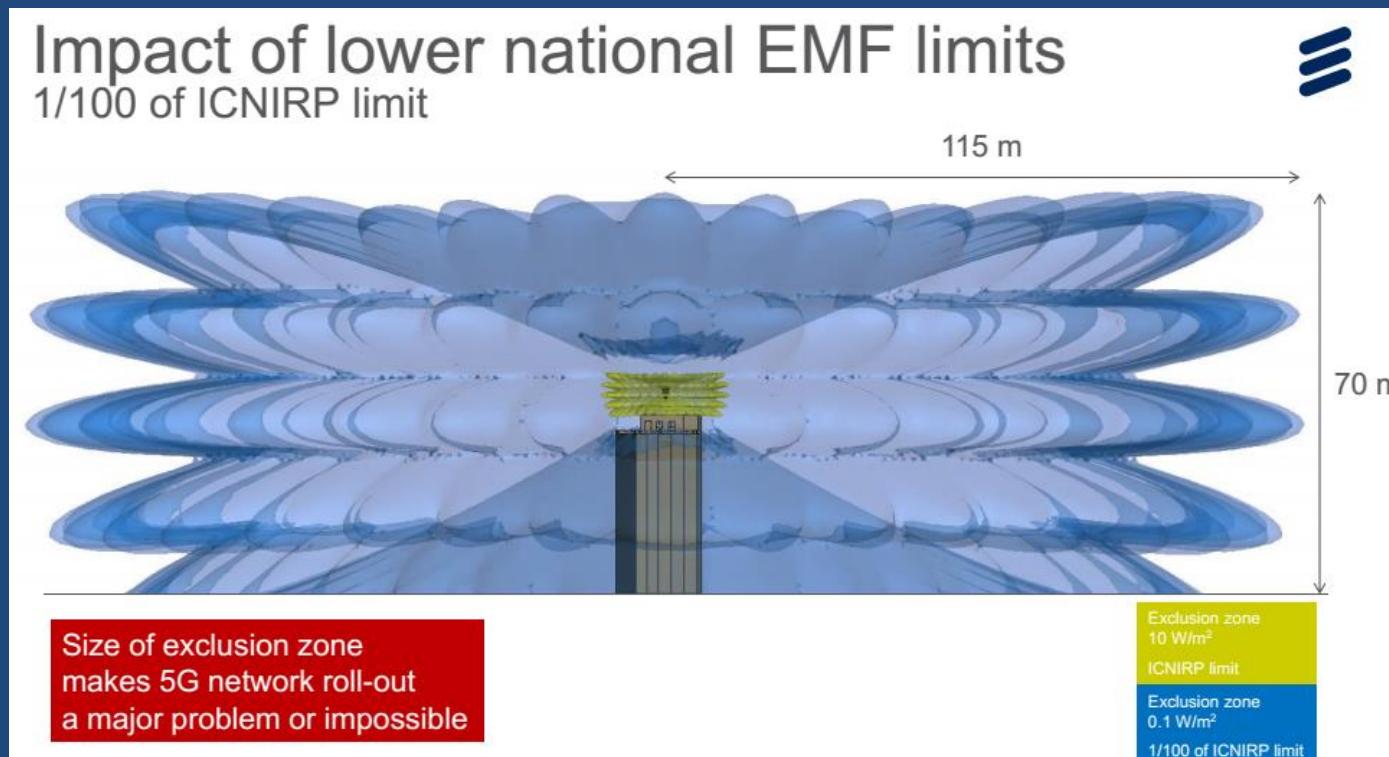

Very large exclusion zone due to unrealistic power - may lead to substantial 5G deployment challenges
IEC 62232 (2017) and ITU-T K.100 standards open up for use of actual maximum output power (95th percentile)

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G's MIMO – severe exposure zone: 115m X 70m

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

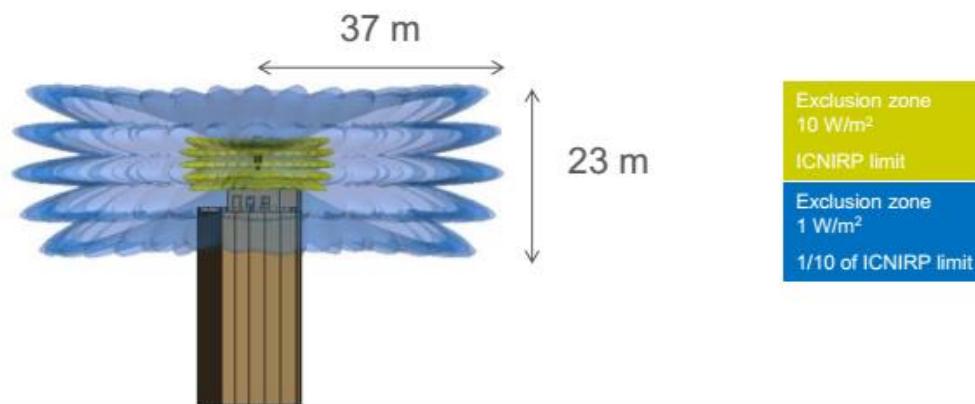

5G's MIMO require downgrading standards

Impact of lower national EMF limits 1/10 of ICNIRP limit

5G site

3.5 GHz, three sectors
28 GHz, one sector
Actual maximum power

Size of exclusion zone
makes 5G network roll-out
very challenging

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G's security issues

74% failure rate for hacking

affecting power grids, smart meters

cars, TVs , Alexas, etc.

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G – world-wide Internet of Things (IOT) “smart grids”

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G's deployment forecast

70% of 5G IoT to be outdoor surveillance cameras, connected cars. Government security

Eventually cars to become major user of 5G IoT (26 million by 2025)

Cellular V2X communications between vehicles, infrastructure, pedestrians, cyclists , including wearables (electronics, sensors, software).

China's Huawei sees 480 million households worldwide with 5G access by 2025: executive Gartner Inc.

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G - so power density-intensive that exposure standards may have to be increased to ensure operational viability.

(Already so for FCC car rules at 2,200 X higher power at 3 metres away than European Council EMF guidelines (giving exposure of 220 µW/cm² for drivers)

Federal Register 2012/08/13/2012-19732

NATO is concerned about additional military communications and electronic warfare (*COMMS & MIMO*) vulnerability.

Brussels METIS 2020 meeting October 5-6, 2018

“Smart meters did not work; let’s avoid the same mistake with the Internet of Things.”

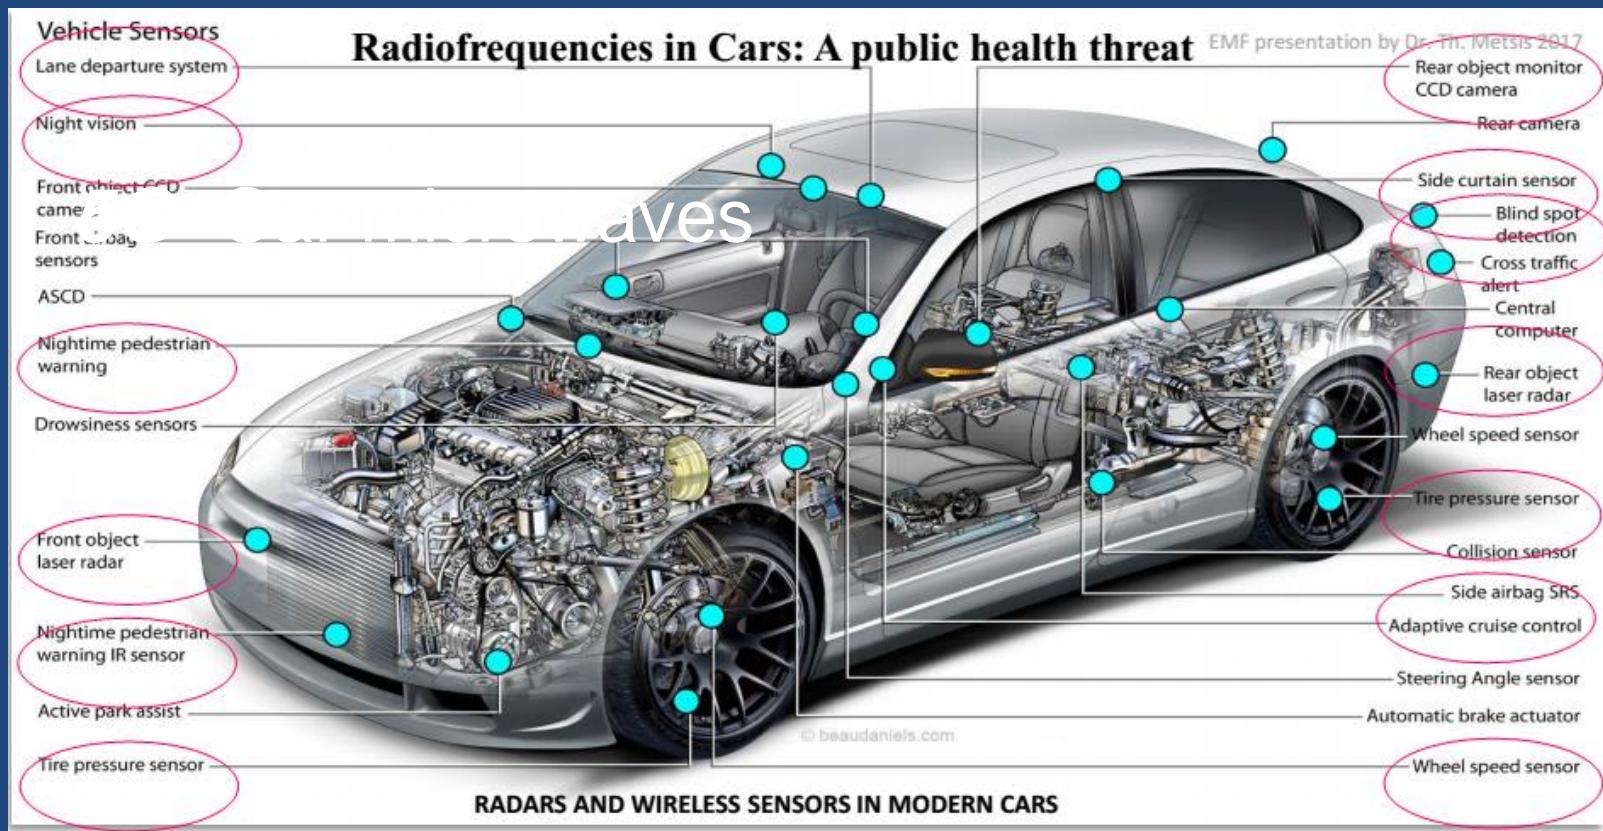

Seyi Fabode, Partner at Asha-Labs.com

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

5G car emissions (~24 GHz and ~77 GHz)

What you should know about the coming 5G – and what to do about it

Andrew Michrowski

Planetary Association for Clean Energy / Société planétaire pour l'assainissement de l'énergie

Microwave emissions associated with cars, including street-side

Frequency range (~ **24 GHz** and ~ **77 GHz**)

EMF from tires and other sources unique to hybrids

Microwaves from cellphone and those of passengers

Microwaves from **Bluetooth, Wi-Fi** hot spots, and from cell towers

Microwaves from radars of other cars

Microwaves from on-board radar sensors to detect motion and driver alertness

FCC Directive : *elevated radars exposure must continue even when cars idle* ;

With many cars at stop sign could results in exposure to those crossing a street to over 100 X Safety Code 6 - especially **dangerous** for children.

What you should know about the coming 5G – and what to do about it
