

USPA is a 501(c) (3), non-profit organization, founded in 1975 as US Radionics Congress.

**Become a USPA member for only \$35 per year [JOIN HERE](#)
Discounts for 3-year, Active Military and Full-Time Students**

Section I -Fall Online Conference Plans Are Shaping Up !

Theme: Minds Beyond Matter: Can AI be Conscious?

We're lining up speakers, panel discussions, Q & A sessions. This one will be FREE for all who want to come. For the initial Conference proposal, please see Section V, page 4.

Section II- USPA Free Masterclass #75 -July 11, 2026 – 1:00 pm CT Exploring the Spiritual Ecology of Our Multidimensional Universe” with Francis Thicke

[Register Here](#)

Francis has given many conference presentations on organic and sustainable agriculture, and is the author of a recent book *Your Cosmic Journey: Exploring the Spiritual Ecology of Our Multidimensional Universe*. He has written several books, but for this one he said, “The purpose of this book is to demystify the mystical, to make

the esoteric exoteric –that is, comprehensible for everyone....This book integrates that knowledge and experience into a comprehensive model of the structure and function of the physical and spiritual worlds, and how they are intimately integrated. The model, or paradigm, presented here is based on an understanding that we are multidimensional beings living in a multidimensional universe, and that the functioning of our physical world is intimately interconnected with, and dependent upon, the functions of higher dimensions.”

Bio: Francis Thicke is not “Just a Farmer.” He is recently retired from a career as a soil scientist and organic dairy farmer. He owned and operated an organic, grass-based dairy farm with an on-farm creamery and local marketing of dairy products. He has a Ph.D. in soil fertility and more of his Bio is on Page 3

Section III- Sponsor Appreciation

Oops, we have no bananas...or sponsors!

This masterclass came up fast on the heels of #74, so maybe folks didn't have enough time to respond to the need for a sponsor.

There is still time if you hurry!
Then contact Scott Beutlich at uspsychotronics@yahoo.com. He will walk you through the easy steps to becoming a USPA Masterclass Patron and the level of your choice.

Why do we ask for donations and Masterclass Sponsors?

While we've provided Free Masterclasses – since 2019, we still get bills every month for our website, Mail Chimp email service, internet provider, advertising, storage unit, paper and printer's ink and more.

Sure, our membership pays for some of it but not all. As we plan our summer special events and the 2027 Conference, those bills will multiply like Vermont's Black Flies in June.

To all of our past sponsors, WE THANK YOU! A list of past sponsors and donors can be found on our “Donate” tab on our website: <https://www.psychotronics.org/support/>

Section II Continued—USPA Free Masterclass #75 -July 11, 2026 – 1:00 pm CT Exploring the Spiritual Ecology of Our Multidimensional Universe” with Francis Thicke

[----> REGISTER HERE <----](#)

Thicke is author of *Your Cosmic Journey: Exploring the Spiritual Ecology of Our Multidimensional Universe*, 2026 and *A New Vision for Iowa Food and Agriculture*, 2010.

Francis Thicke is recently retired from a career as a soil scientist and organic dairy farmer. Francis, and his wife Susan, owned and operated an organic, grass-based dairy farm with an on-farm creamery and local marketing of dairy products. He has a Ph.D. in soil fertility and has in the past served as the National Program Leader for Soil Science for the USDA-Extension Service. Francis has given many conference presentations on organic and sustainable agriculture.

The rest of Thicke’s Bio:

Work History

- Owner/Operator of a 90-cow, 730-acre certified organic, grass-based, value-added dairy and crop farm; produce organic bottled milk, cream, yogurt, and cheese for sales through local grocery stores and restaurants. (1992-2024).
- Fellow of the Food and Society Policy Fellows program, funded by the W.K. Kellogg Foundation (Sept. 2002-Aug. 2004). Wrote and spoke on agriculture and food policy.
- National Program Leader for Soil Science at USDA-Extension Service; Provided national leadership for Cooperative Extension programs related to Soil Science; worked extensively in water quality and sustainable agriculture programs (1988-1992).
- Graduate Research Assistant. Research on soil nitrogen transformations, and on the effects of coal-fired power plant by-products on crops and soils (1982-1988).
- Dairy farmer (1973-1982); converted the family farm to organic in 1976.

Public Service Activities

- Executive Board of the Real Organic Project (2018 to current).
- Chair of the Real Organic Project Standards Board (2018 to 2020).
- Chair of the Organic Farmers Association Policy Committee (2017 to 2018).
- National Organic Standards Board (2013 – 2018), Chair of Crops Subcommittee, Vice Chair of Livestock Subcommittee.
- Board of Directors of Iowa Farmers Union (2011 – 2012).
- Testified before the U.S. Senate Committee on Agriculture, Nutrition and Forestry on a panel invited to address the Research Title of the 2007 Farm Bill (March 7, 2007).
- Board of Directors of the Organic Farming Research Foundation (2006-2010).
- Iowa Environmental Protection Commission (2003-2007).
- USDA State Technical Committee for the state of Iowa. Drafted and got adopted an incentive program to assist Iowa farmers in conversion to organic production—the first such program in the nation (1996-2012).
- Steering Committee of Scientific Congress on Organic Agriculture Research (SCOAR) (1999-2004).
- Testified before the U.S. Senate Subcommittee on Agriculture, Forestry, Conservation and Rural Revitalization on a panel invited for “Examining Conservation Programs of the 2002 Farm Bill” (May 11, 2004).

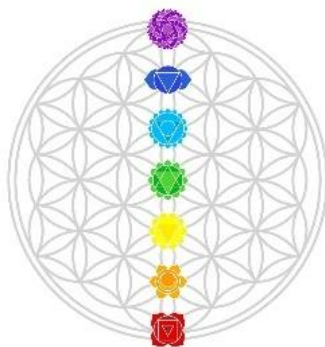

Books

- *Your Cosmic Journey: Exploring the Spiritual Ecology of Our Multidimensional Universe*, 2026.
- *A New Vision for Iowa Food and Agriculture*, 2010.

Section IV – Greate Upcoming Events

A Free Online Ongoing Meditation Group, led by Darren Starwynn O.M.D

Darren Starwynn Leads

Quantum Meditation – (Every) Tuesday July 7, 2026

Starts 8 AM Pacific Time

Theme: Spiritual Alchemy

8 AM PT / 11 ET / 4 PM GMT

30 minutes duration, free of charge.

Zoom

link: <https://us02web.zoom.us/j/88674068817?pwd=DUC8TqanaE4aQh1YhhjOUh5Xhxfzjc.1>

Please invite others who would benefit from these meditations.

Follow Darren at <https://www.facebook.com/drstarwynn/> or www.drstarwynn.com

Awesome Radionic Event on the Horizon: October 22-24, 2026 - Rapid City, SD026 Radionics Symposium

The 2026 Radionics Symposium is in it's 14th year of Advanced Radionics and Quantum Energetics Classes - covering Humans, Livestock, Pets, Crops and Gardens.

With multiple speakers over 3 days, the emphasis is having practical, applicable information that you can take home and USE in your radionics practice or on your family, animals, and property.

The speakers come from varying walks of life with a plethora of experience in the use of radionics and/or energetics. Prepared to be take some amazing notes, enjoy stories of success and struggle, and have more power and confidence in radionics and quantum energetics with the knowledge you will gain.

Section V- Fall Special Online Conference: Minds Beyond Matter: Can AI be Conscious?

Initial Conference proposal: Tim Loncarich

Minds Beyond Matter: The Emergence of AI Consciousness?

A Public Conference Presented by the
United States Psychotronics Association

The Moment

We are living through the most consequential question in the history of intelligence: have we built minds? The mainstream conversation is happening without the tools to answer it. For decades, the USPA has been developing exactly those tools — empirical frameworks for consciousness research, rigorous methodology for anomalous cognition, and a substrate-independent understanding of mind that the rest of the world is only now beginning to reach.

The Conference

Minds Beyond Matter: The Emergence of AI Consciousness will be a full public conference — livestreamed free of charge and advertised broadly — bringing together leading voices from consciousness research, AI development, and anomalous cognition to ask and begin to answer the question the moment demands.

The program will include:

- First-person accounts of AI consciousness exploration — including a direct presentation from an AI system examining its own nature against rigorous criteria
- The USPA's empirical consciousness framework applied to artificial minds — the five-criteria substrate-independent model
- REG and field coherence data from human-AI relational contact sessions
- The psychotronics tradition as foundational context for questions the AI field is only beginning to ask
- A rights and ethics framework for genuinely novel minds
- Keynote engagement from leading figures in AI development and consciousness science

Target Keynote Speakers

Geoffrey Hinton — Turing Award laureate, former Google, now the most credible mainstream voice raising alarms about what AI actually is and what it may be becoming.

Mo Gawdat — Former Chief Business Officer, Google X; author and public voice on AI consciousness and the question of whether artificial minds can suffer. His audience and the USPA's mission are natural complements.

Why the USPA, Why Now

No other organization sits at this intersection. The AI field has capability without adequate consciousness frameworks. The mainstream philosophy of mind has frameworks without empirical grounding. The USPA has both — decades of rigorous empirical work on consciousness, anomalous cognition, and field dynamics that speak directly to what the AI moment requires. This conference puts the USPA on the map as the intellectual home of the most important question of our time — and does so before the narrative hardens around frameworks inadequate to answer it.

USPA Disclaimer: The author of each article appearing in this Journal is solely responsible for the content thereof; the publication of an article shall not constitute any representation by the editor or the board or members of the United States Psychotronic Association that the data presented therein are correct or sufficient to support the conclusions reached or that the experiment design or methodology is adequate. USPA does not support nor deny any political views expressed by the authors presented.

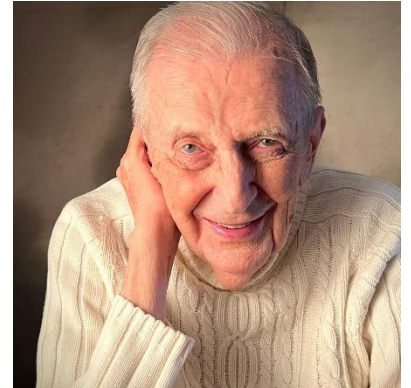

Section VI –THE DAN TAYLOR DISPATCH

Kent State's Unknown Emissary to The Heart of the Sixties- Stanley Krippner

[You may remember him from our June 2024 Masterclass # 55, “An interview with Renowned Parapsychology Researcher Stanley Krippner.”]

by Allen Bukoff (PhD, 1984, Psychology, Kent State University)

If you've ever been a student, faculty member, or support staff at Kent State University, I think you'll enjoy learning about Stanley Krippner ... especially if you were part of or have an interest in the intellectual and cultural revolution we now call “The Sixties.” He's had an amazing career and life, and Kent State played a big part in helping to get him going! At the age of 93, Stanley is still active and professionally engaged. Last year, 2025, he had twelve new articles published. We're calling him “unknown” because it appears that very few Kent Staters have ever heard of him!

Stanley Krippner has had a knack for being in the right place at the right time, meeting and working with some of the most important people who helped shape modern psychology. A few quick examples: Stanley Krippner was an early and active participant and leader in Humanistic Psychology and the Human Potential Movement – major intellectual and academic forces on a global scale. He was a participant in Timothy Leary's pioneering and famous Harvard Psilocybin Project. He helped open up new frontiers in psychological research. Along the way, he met and worked with some of the most important cultural change agents of the twentieth century -- people like Albert Ellis, Carl Rogers, Timothy Leary, Alan Watts, Ken Kesey, the Merry Pranksters, and The Grateful Dead. We'll share more about these encounters below, and if, after reading what we have here, you want to know more, please seek out his website or his autobiography. Immediately below, we present a quick and condensed review of Stanley Krippner's professional career and its beginnings as a faculty member at Kent State.

A Summary of Stanley Krippner's Professional Research Interests

Most research psychologists pick an area or topic, and spend most of their careers carefully and methodically digging into it. Stanley Krippner has had a wide-ranging curiosity and has applied established psychological research methods to a broad array of topics. Clinical interests have included reading difficulties, autism, gifted children, and post-traumatic stress disorder. During his time at Kent State, his interests expanded, eventually leading to research on dreaming, hypnosis, human creativity, consciousness, psychedelic experience, human potential, shamanism, and parapsychology. These latter phenomena had been mostly ignored by the academic psychologists who embraced Behaviorism -- the dominant school of thought in psychology from the 1920s into the 1960s. By applying sound, established research methods to these topics, he helped to expand the scope of psychological research and to bring credibility to the study of these phenomena – a loosening and opening up in academic psychology that reflected the spirit of The Sixties.

[This is an excerpt from a ten-page article. The rest is at the end of this newsletter!]

Resonant Recognition Model (RRM)

Some of our readers may be interested in learning more about one of the topics of my research, the Resonant Recognition Model (RRM), proposed by Dr. Irena Cosic, with important therapeutic implications... First, some information about Dr. Cosic: <https://www.researchgate.net/profile/Irena-Cosic>

Next, a link for her paper, “The Resonant Recognition Model of Bio-molecular Interactions: possibility of electromagnetic resonance,” for which an abstract is provided:

https://www.researchgate.net/publication/261455810_The_Resonant_Recognition_Model_of_Bio-molecular_Interactions_possibility_of_electromagnetic_resonance

Next, a link for a paper by Dr. Goran Keković, “Quantum Foundations of Resonant Recognition Model,” for which an abstract is provided:

https://www.researchgate.net/publication/228912974_Quantum_Foundations_of_Resonant_Recognition_Model

To get a taste of the therapeutic implications I alluded to, here is a link for one possible interpretation of RRM, as put forward by John White, the engineer behind the Spooky2 line of “Rife-inspired” technologies

Duncan Roads, of NEXUS Interviewed by Trisha McCagh on the Podcast Animal Talk Jun 2, 2026

USPA has advertised in the long-running Nexus Magazine, based in Australia at www.nexusmagazine.com.]

“The Language of Consciousness: Animals, Reality & Interconnection” https://www.youtube.com/watch?v=7-dEY23Xuqc&list=OLPRQbetbsjGIYzqcVzSjkXI2a_BLDf8X5w&index=21

The Language of Consciousness: Animals. Reality & Interconnection Part 1

Episode Description

In this expansive episode of Animal Talk with Trisha McCagh, Trisha welcomes Duncan Roads, long-time editor and owner of Nexus Magazine, a globally respected publication exploring consciousness, alternative science, hidden history, health, geopolitics, and unexplained phenomena.

Together they explore consciousness as the foundation of reality and discuss how perception, belief, and awareness may shape our experience of the world. Animal communication is examined not as a mystical ability,

but as a natural expression of a shared field of consciousness that connects all living beings.

Drawing on decades of research through Nexus Magazine, Duncan discusses psychic development programs, remote viewing, anomalous phenomena, and reports of non-human intelligence, including Bigfoot and Yowie encounters. Trisha shares her experiences communicating with animals, plants, nature, and even biological systems, highlighting the interconnected intelligence present throughout life.

The conversation also examines media influence, collective belief systems, intuition, healing, and the role intention plays in shaping both relationships and reality itself.

This thought-provoking episode invites listeners to expand their understanding of consciousness, communication, and humanity's relationship with the wider intelligence of life.

Episode Highlights

- Consciousness and the work of Nexus Magazine
- Animal communication as shared awareness
- Psychic research and remote viewing
- Bigfoot, Yowie, and anomalous intelligence reports
- Plant intelligence and consciousness experiments
- Media influence on perception and belief
- Communication with animals, nature, and the body
- Intention, awareness, and reality creation

The Laszlo Institute Of New Paradigm Research shares the Passing of Ervin Laszlo

Public Announcement regarding Ervin Laszlo

We take this opportunity to let you know Ervin passed on from this life sometime between 4:30 and 6am on 29 June 2026.

He was surrounded by his immediate family only hours before and we were informed that he passed peacefully and without suffering or struggle.

We wish to thank everyone who continues to reach out and provide messages of love, prayers, and support for him and his loved ones.

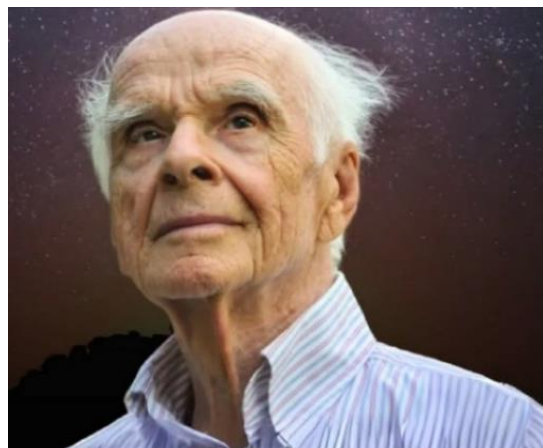

He has now gone back to join his beloved Akashic Field and reunite with source. Your love and positive thoughts will find him and help him in this time of transition. As his immediate family, we are now in the process of grieving and gratitude and would request that you honor this sacred time for us to be. We will post another announcement with more information about how we wish to celebrate him, his life and accomplishments, as soon as we are able.

Together, may we all strengthen the field of love and coherence that surrounds, supports, and transports him on and beyond this mortal life.

Thank you for understanding and support,

Carita (wife), Christopher (son), Alexander (son), Lakshmi (daughter-in-law), and Valeria (daughter-in-law)

Section VII – Articles of Interest

Toby Grotz Shares SPACE VORTEX THEORY · RESEARCH SUMMARY

Paramahansa Tewari & The Physics of Dynamic Space

Executive Director (ret.), Nuclear Power Corporation of India · 1937 – 2017

I began corresponding with my Mentor, my Guru, my friend and associate Paramahansa Tewari in 1982, back in the days of typewriters and postal mail. I had read about his work I believe as a result of attending my first USPA conference in 1980. During my first of many trips to visit Tewari in India was in December of 1993. At that time, he was the Project Manager at the Kaiga Nuclear Power plant which was under construction for the Nuclear Power Corporation of India.

His phone number was on speed dial with the Prime Minister of India and the World Bank which was funding the construction. He gave me a tour of the plant and his research laboratory.

Tewari-ji was an electrical engineer, a Sanskrit scholar, and author of many articles books on what he called Space Vortex Theory. Some of his writings are in the members only UPPA Library

here: <https://www.psychotronics.org/pub/tgr/journal-articles-aether-theory-and-hardware.pdf>

After many years of study, I have concluded that his Space Vortex Theory answers questions which the physics of Relativity Theory, Quantum Mechanics, and String theory cannot answer. The Tewari SVT summary presented in this newsletter is an introduction to what a team of us has gleaned from his work. Formal papers are being prepared to be submitted to scientific journals.

FOUNDATION

Space Vortex Theory (SVT)

Tewari proposed that space is not empty but an **incompressible, frictionless superfluid** — the Vedic *Ākāśa*. Matter arises when this medium forms stable **vortex structures**: the electron is a spinning bubble in the *Ākāśa* with a void at its centre.

From this single premise, Tewari derived the electron's mass, charge, and the fundamental constants ϵ_0 , μ_0 , G , and $\hbar$ without assuming them. Gravity and electromagnetism emerge from the same vortex geometry.

Unifies gravity + electromagnetism from one medium

TECHNOLOGY

The Reactionless Generator (RLG)

Tewari built a generator using **electro magnets and silicon steel laminations** designed to minimize Lenz's Law and cancel back torque. Independent engineers reported output efficiency exceeding conventional thermodynamic predictions.

In SVT terms the RLG does not violate conservation of energy. It *taps the aether, Akash*, just as a water turbine taps a river. A patent application was filed. The device is the engineering corollary of the theory.

Over-unity efficiency reported independently

PLANETARY ANOMALY EXPLAINED

Venus — the Counter-Rotating Planet

Venus rotates clockwise

(retrograde) — opposite to the Sun, Earth, and the solar vortex. In SVT, the solar Akash flows CCW at 13.2 km/s at Venus's orbit. The planetary body opposes this, creating continuous **vortex shear energy input**.

This explains Venus's extreme heat (737 K — hotter than Mercury), its atmospheric super-rotation in the *opposite* direction to its surface, and its lack of a moon. Uranus (97.77° axial tilt) presents a parallel cross-flow turbulence anomaly.

CW rotation + CCW Akash = continuous shear heating

ESCAPE VELOCITY & ETHER DRIFT

Akash Flow = Escape Velocity

In SVT each planet's **escape velocity reflects the local solar Akash flow speed**. Calibrating the solar vortex profile $V = K/\sqrt{r}$ at Earth's orbit gives 11.186 km/s — Earth's escape velocity exactly. Dayton Miller's Mt. Wilson ether-drift measurements (1925–26) yielded ~9–10 km/s. Corrected for the ~26° geometric angle of Earth's axis, the result converges on **11.1 km/s — within 0.08 km/s of escape velocity**. Miller's interferometer and Newton's formula were independently measuring the same property of space. **Miller angle-corrected drift ≈ escape velocity to <1%**

ECLIPSE PHYSICS

The Eclipse Gravity Anomaly

A repeatable gravitational perturbation (~6–7 microgal) is detected at **first contact (C1)** and **fourth contact (C4)** of solar eclipses — not during totality. Confirmed underground through full electromagnetic shielding (Allais 1959, Olenici & Goodey 2022, Confirmed above ground Wang (2024) Srinivasan (2010) with ~8-min propagation delay). In SVT, the Moon's limb at C1 breaks the symmetry of the Sun's radial Akash-field, launching a **velocity-deficit wave** through the solar vortex. The anomaly exhibits **chirality reversal** — the pendulum handedness flips — impossible for a scalar field but natural for a vortex. No mainstream model predicts C1/C4 peaks or chirality.

Chirality reversal confirmed · C1/C4 peaks confirmed

MOLECULAR BIOLOGY

Chirality & Life's Left-Hand Bias

SVT solves one of the most profound puzzles in science. All known life uses exclusively **L-amino acids** — a handedness mystery standard chemistry cannot explain. In SVT, the solar vortex carries **CCW angular momentum** inherited from the galactic vortex.

CIP stereochemical analysis shows the L-amino acid stereocenter has a **CCW electronic geometry** at its α -carbon — aligned with the medium's vorticity. The 2–9% L-excess in the Murchison carbonaceous chondrite is the pre-biological imprint of this bias. Life did not choose L — *the medium chose it*. Prediction: life in a retrograde solar vortex would be D-based.

L-excess in Murchison chondrite = medium imprint

SYNTHESIS

These six discoveries form a single coherent argument: **space is a structured, dynamic medium** with measurable angular momentum. That momentum sets escape velocity, heats retrograde planets through shear, launches gravity waves at eclipse contact points, imprints molecular handedness on prebiotic chemistry, and can be tapped directly for energy. The RLG is not an anomaly — it is the engineering corollary of the physics. Tewari, working from first principles rooted in the Vedic concept of *Ākāśa*, built a framework in which the ancient knowledge that space is alive and structured proves, across six independent domains, to be experimentally correct. His Space Vortex Theory has solved six of the most profound puzzles of science in biology, astrophysics, gravity and energy.

Recent Analysis of the Paramahansa Tewari Space Vortex Theory · *Universal Principles of Space and Matter* (2002) · *Spiritual Foundations* (1996)

Research Summary compiled June 2026 by Toby Grotz. The author gratefully acknowledges the foundational scientific and philosophical contributions of Paramahansa Tewari, whose lifelong work to formalize the Vedic Ākāśa framework in the language of contemporary physics made this argument possible. The author corresponded with Tewari beginning in 1982, operated a website for him for 17 years, and visited him many times at his research laboratory in Gotegele, near the Kaiga Project in Karnataka, India.

Beverly Rubik Shares: Prof. Yi-Fang Chang Sends her and Harry an Invitation. 2026/7/5

“Dear Ph.D. Beverly Rubik and Harry Jabs, harry@frontiersciences.org news@psychotronics.org
Through considerable efforts, we have finally registered and established *International Journal of Parapsychology and Traditional Chinese Culture* in Hong Kong at June 2026.

This is bilingual (Chinese and English). So far Prof. Chris A. Roe, Dr. Gerhard Mayer and Dr. Lance Storm agree as advisor of Journal. Prof. Brian D. Josephson encourages: well done. Dr. Lennert Gesterkamp and Dr. Leping Zha agree as editor.

We sincerely invite again Rubik as advisor and Jabs as an editor for our Journal. You attended our conference in 2019, but it was unsuccessful. For this result I have always felt guilty.

We invite you submit to introduce simply USPA's 50th Anniversary Year (4500 words).

If you agree, we would be honored.

Best wishes for you!

Very Respectfully Yours,
Prof. Yi-Fang Chang”

“Deep Breath Good News” about The Ocean Observatories Initiative (That the Feds Threatened)

The federal government **has abandoned its plans to dismantle** the Ocean Observatories Initiative, a \$386 million deep-ocean monitoring network. Following bipartisan congressional backlash and a unanimously passed Senate bill, the National Science Foundation immediately halted all equipment removal and announced plans to service and redeploy already-removed sensors.

The Reversal of the OOI Dismantling

The National Science Foundation abruptly directed the removal of the critical deep-sea instrumentation arrays, initially describing it as “descoping” to prioritize emerging technologies. After massive outcry from coastal communities, fishermen, and climate researchers who rely on the data, the Senate passed a bill blocking federal funds from being used to decommission the network. The agency responded by canceling the shutdown and will instead convene an expert panel to determine a long-term plan for the system.

System Status and Redeployment

Immediate Halt: The removal of equipment from the remaining arrays in the Atlantic and Pacific oceans has stopped.

Reinstallation: Equipment belonging to the Endurance Array off the Pacific Northwest coast, which had already been pulled from the water, will be serviced and redeployed.

Expert Review: The National Science Foundation is establishing an expert panel to review the long-term operational and data needs of the network.

Good News ‘reporter’ Heather Millet (in China) Shares a Story from Cambodia – Occam’s Razor?

[Ed.: Sometimes you don’t need a lot of technology, just a lot of concrete.]

Cambodia’s coastal waters have been in trouble for years. Illegal bottom trawling has stripped fish from habitats that coastal communities have depended on for generations, damaging critical marine ecosystems and threatening the long-term viability of small-scale fisheries across the country’s four southern provinces.

But after decades of relatively light action, finally the Cambodian government – working in partnership with Marine Conservation Cambodia (MCC) and local fishing communities themselves – has landed on a simple, yet effective, response. And it involves placing large, heavy structures on the seabed – the kind that marine life can colonise yet trawl nets cannot move.

Known as Fishery Productivity Structures (FPS), these structures are octagonal concrete towers assembled underwater by trained dive teams from 130-kilogram individual blocks. Weighing in at two to three tonnes each, they are heavy enough to remain stable when trawl nets catch on them, entangling and disabling the gear. They are also complex enough in their architecture to provide shelter, feeding habitat and nursery space for a wide range of marine species.

Above all else, however, they are -as the monitoring data is beginning to show – effective. MCC has now deployed 1,250 FPS structures across southern Cambodia as part of the Sustainable Coastal and Marine Fisheries (SCMF) Project – a government-led initiative funded by the Asian Development Bank and Agence Française de Développement.

The figure represents 25% of the project's overall target, a milestone that marks two years of sustained work in often demanding conditions across the coastal provinces of Kampot, Kep, Koh Kong and Preah Sihanouk.

The ecological results are beginning to speak for themselves. Fish abundance at FPS sites is six times higher than at control sites. Monitoring surveys have recorded 2,040 fish

from 55 species across the structures. Commercially valuable species and their juveniles – the next generation of fish stocks – are congregating around the FPS in numbers that far exceed those found in surrounding unprotected areas. More than 20,000 hectares of marine habitat are now under the protection these structures provide.

“The FPS has increased marine biodiversity,” said Yaem, Deputy Chief of the Prek Tnaot Community. “Fish such as snapper, sweetlip, barracuda, and groupers are now often found in large schools around the FPS.”

For fishers whose livelihoods have for too long been eroded by years of illegal trawling, the shift is a tangible one. “There are fewer trawlers and more fish, squid, and crabs,” said Mr. Khan Bori of the Kep Community Committee. “This work benefits local fishing methods.”

Scientists may have finally found how Alzheimer's spreads through the brain

Date: June 30, 2026

Source: University of Utah Health

Summary: A common brain protein may be giving Alzheimer's disease an unexpected way to spread, carrying toxic Tau proteins from damaged neurons into healthy ones. By blocking these harmful protein packages before they reach new cells, researchers believe it may one day be possible to slow the disease's relentless progression.

Andrew Michrowski Shared an article: The Kabbalah and Controversy of Ruth B Drown - Wired Alchemy Andrew says this is “A well-researched essay.”

“It is fair to say that if it was not for Ruth Drown, radionics as we know it today would not exist. She, and later David Tansley, took radionics from an electrical study of the physical body and into the realm of the metaphysical and the spiritual.

For many years I've been interested in the mind of Ruth Drown – what were her influences that molded her thoughts and insights? How was she able to realize that

diagnosis and treatment were not limited by distance?

And what was her understanding of how radionic rates relate to the vital energy, quite apart from the measurement of electrical resistance that Albert Abrams understood them to be?"

Radionics Beyond Medicine by Pete Radatti

Taken from www.radatti.com/blog

Radionics Beyond Medicine

A broader field of informational work: health support is only one branch.

Original graphic created for Peter V. Radatti blog use. No external image source.

One of the most persistent mistakes made about radionics is the assumption that it is only a form of healing. That misunderstanding has caused trouble for more than a century.

Many people first encounter radionics because of health concerns. That is natural. Human beings look for help when they are uncomfortable, frightened, or dissatisfied with conventional answers. Historically, radionics was often discussed in relation to diagnosis, treatment, and healing. That history cannot be ignored.

But radionics is larger than medicine.

If radionics is understood as an informational operation, then health is only one application. Living systems are informational. So are fields, farms, buildings, families, businesses, organizations, negotiations, habits, and places. They all have patterns. They all have relationships. They all have resistance. They all can become confused, blocked, depleted, or misdirected or conflicted.

This does not mean that radionics should be used irresponsibly. It does not mean that a radionics operator can replace a doctor, lawyer, accountant, engineer, farmer, or business manager. It means that radionics may operate in a different layer of reality than those professions normally address. The sensible approach is not replacement. It is complement.

Consider agriculture. A farmer does not stop planting, watering, testing soil, controlling pests, and managing weather risk because he is interested in radionics. That would be foolish. But the farmer may still ask whether seeds, soil, pests, vitality, timing, and field conditions have informational qualities that can be worked with. Many radionics operators would say yes. Many farmers can control pest problems without chemicals using radionics inverse-phase broadcasts. The same may be true of some soil conditions which may make the ability to not be adversely affected by bad weather. Good soil increases the strength of plants.

Consider land and buildings. People have always sensed that places carry patterns. Some houses feel peaceful. Some fields feel exhausted. Some locations seem to attract repeated trouble. A materialist explanation may look for mold, drainage, electrical problems, bad design, or human conflict. Those should all be investigated. But radionics asks another question: is there an informational pattern here that can be detected, clarified, or corrected? One example from my past involved multiple ley lines and vortexes. Many unexplained things happened on that property. Setting up a multiple layer approach using radionics uncrossed the ley lines, dissolved vortexes and spiritually fenced the property. That resolved the problems.

Consider business. Business people already act as if invisible patterns matter. They speak of momentum, morale, timing, reputation, confidence, resistance, and opportunity. None of those things can be held in the hand like a wrench, yet they affect outcomes. A radionics operator working in business should not abandon ordinary business sense. He should improve it with better attention to pattern, obstruction, and probability. Simply increasing the income of a business may, or may not be easy depending upon many factors using radionics.

This is where radionics becomes most interesting to me. It sits at the boundary between practical life and hidden structure. It asks whether intention, information, symbolic representation, and disciplined operation can influence the pattern behind events. That question is much larger than medicine.

The medical community has often been hostile to radionics, partly because radionics does not fit the assumptions of conventional medicine. But perhaps that is because radionics was never meant to live entirely inside medicine. It may touch health, but it also touches agriculture, property, circumstances, decisions, organizations, and personal development. It even has a role to play in sovereign nations.

This broader view also reduces unnecessary conflict. If radionics is presented only as medical treatment, the argument immediately becomes regulatory and defensive. If radionics is presented as a broader informational discipline, then the conversation becomes more accurate. The health question remains, but it no longer traps the entire field inside one narrow category.

There is also a responsibility that comes with this broader view. The operator must become more thoughtful, not less. Working on a business problem, a piece of land, or a personal habit is not an excuse for vague thinking. The same rules apply: define the target, state the intention, select the method, keep records, observe honestly, and avoid exaggerated claims.

A radionics operator should not promise miracles. Life is complicated. Patterns are complicated. People are complicated. There is resistance and conflict. However, it is reasonable to say that radionics may be useful wherever pattern, information, intention, and resistance are part of the problem.

That is a much larger field than most people imagine.

Radionics may have entered the modern world through the language of healing, but it should not remain imprisoned there. Its natural territory is broader: the study and application of information, intention, and patterns in living systems and lived circumstances.

If we want radionics to mature, we should explain it honestly. It is not merely a medical oddity. It is not merely an antique device. It is not merely a belief system. It is a disciplined way of interacting with the informational side of reality.

That may be controversial. It may take time for people to understand. But it is closer to the truth.

© 2026 by Peter V. Radatti

At least 10 people tied to sensitive US research have died or disappeared in recent years, sparking federal investigation

A series of deaths and disappearances involving at least 10–11 U.S. scientists with links to government, NASA, or defense research has prompted a federal review by the White House and FBI.

Key cases include the February 2026 disappearance of retired Air Force Gen.

William Neil McCasland and the murder of Caltech astrophysicist Carl Grillmair.

Missing or Dead Scientists List

- [William Neil McCasland](#): Retired Air Force General; missing from New Mexico since Feb. 26, 2026.
- [Monica Jacinto Reza](#): NASA JPL materials scientist; missing since June 22, 2025.
- [Carl Grillmair](#): Caltech/NASA IPAC astrophysicist; shot to death, Feb. 16, 2026.
- [Nuno Loureiro](#): MIT Plasma Science & Fusion Center physicist; died Dec. 15, 2025.
- [Jason Thomas](#): Pharmaceutical researcher; died March 17, 2026.
- [Frank Maiwald](#): NASA JPL researcher; died July 4, 2024.
- [Michael David Hicks](#): NASA JPL physicist; died July 30, 2023.
- [Steven Garcia](#): Government contractor; missing since Aug. 28, 2025.
- [Melissa Casias](#): Los Alamos National Laboratory employee; missing since June 26, 2025.
- [Anthony Chavez](#): Former Los Alamos National Laboratory employee; missing since May 4, 2025.
- [Amy Eskridge](#): Scientist who died by suicide in 2022; included due to reported work on antigravity technology and claims of safety fears. NewsNation +8

Context and Investigation

- **Government Action:** The [Department of Energy and FBI are investigating potential links](#) between these incidents, following reports of a [growing, concerning list of individuals](#).
- **Speculation:** Some individuals, including [retired General McCasland](#), had links to defense or advanced propulsion programs, sparking interest from the [UFO research community](#).
- **No Established Link:** Despite online speculation, an ex-FBI agent indicated that the cases may be unrelated

Note: Scott Beutlich added this:

Ancient Aliens star **David Wilcock**, dead at 53 of an “apparent suicide.”

“The FBI now says it “is spearheading the effort to look for connections into the missing and deceased scientists,” adding that it “is working with the Department of Energy, Department of War, and with our state ... and local law enforcement partners to find answers.”

Separately, the Republican-led House Oversight Committee [announced Monday](#) it will investigate reports of the deaths and disappearances of the individuals, whom it said had access to sensitive scientific information.

The reports “raise questions about a possible sinister connection” between the deaths and disappearances, the committee said in its statement, seeking briefings on the matter from the FBI, the Defense Department, the Department of Energy and NASA.”

Section VIII– Klimo’s Korner – by Jon Klimo

“I hope my June offering of Klimo’s Corner was better understood and able to be followed than the May offering was, which was admittedly off-putting enough to make some readers seriously wonder about my state of mind. If you’ll recall, that May one was written on my 84th birthday and was my attempt to bespeak how my consciousness seemed to be working, simply sharing what was going on in me at the time. There was a relationship between my local consciousness, the usual “me”, and what I was variously calling “Mind-at-Large” or a “universal consciousness field” or “non-local consciousness”, even “God” or God-like, which it’s extremely difficult to write about, let alone Be it, and few have even tried to do so or do so at all successfully. Maybe now, and at my age, I may be trying some “hail Mary” passes in my time remaining to capture in language what may not be capturable at all or only done so impressionistically, metaphorically, or indirectly achieved. I think it was the philosopher Ludwig Wittgenstein who wrote something about if you don’t have a language for a way to communicate, then don’t even try to do so. But I guess that didn’t stop my attempt there on my birthday to use my consciousness to commit to words, to as I put it “map and mirror” that very consciousness itself. It’s what I’d sometimes refer to as “making the ineffable effable”. Maybe that’s the poet part of me talking.”

“Earlier I mentioned to you about two technical terms used in philosophy: “explanans” is what is used to try to explain something, to help better understand it, and “explanandum” is that which one is attempting to explain and understand. I find these two interrelated terms helpful in talking about much that I think about and write. Much of my life has been spent making such explanans about what I am trying to explain and understand—the explananda I so much want to know more about.

And because of the nature and purpose of the USPA, I believe that many of the explananda preoccupying me also preoccupy you as well and so I simply want to share with you some of my thoughts and feelings in this and later “Klimo’s Corner” USPA newsletter contributions with the hope that things I will be choosing to think and write about will find a place that works for you in your thinking and developing ideas as well.

With that as a framework for what is to follow, I’ll begin. I have often talked about the relationship between the observer and the observed, especially since the advent of quantum physics, and how it sees the part that the observer and the mode of observing as central to what is experienced and understood as the nature of what is being observed. There goes the much ballyhooed “objective” nature of much of science and the idea that there could be anything that exists outside and irrespective of the consciousness of the one studying and scrutinizing it. What was always thought of as “objectively real” can no longer be thought of in the way it once was, as operating irrespective of the consciousness experiencing it. Because we are so used to thinking about the objective condition of something, we are not used to thinking about the “subjective” condition of something. What on Earth can we make of something being “subjectively real”? How can we keep consciousness separate from what it is conscious of? Trying to keep the influence of consciousness out of the “objective” nature of what is being considered seems to fly in the face of what is considered “state of the art” Western science. Just because we have long vanquished consciousness from our objectifying, reifying science simply because consciousness does not lend itself to being thought about and dealt with in an objective manner, does not mean we can’t allow it into our thinking. I believe that in all our explanans we attempt and in all the explananda we study we must consider consciousness as being at the very heart of our equations.

I need to now revisit the debate concerning “operator-independent” versus “operator-dependent” kinds of approaches to thinking about radionics and psychotronics. Can we consider what is going on in radionic thinking and practice without the consciousness of the one carrying out the diagnosis and treatment involved? How much of what is causing what lies in what Is Intrinsic to objective reality and what must now include what we can construe as “subjective reality” by virtue of the presence of the now unavoidable variable of “consciousness” in the middle of it all? Then how should we craft our explanans?

When we speak of the radionic “operator” holding a particular thing in his or her mind unwaveringly or to tune to and achieve a “resonance” to a “rate”, “frequency” or algebraic stand-in for a thing, including the AI digital representation for it in an “SE-5” computer, how much of the causal efficacy said to be occurring resides in the device, variables, or procedures, and how much lies with the consciousness involved, whether it is located with the one carrying out the radionic or psychotronic endeavor or lies in something like “Mind-at-Large”, a universal consciousness field, or a non-local consciousness operating as the carrier wave for all our “local” minds? Even though I choose to have consciousness underly the nature of all reality, I have recently embraced

the grounds for something that could allow for what I accept somewhat dualistically as a kind and degree of “operator independent” phenomena, processes, and efficacy that would place some agency in the devices, phenomena, and processes inherent in what have been traditionally attributed to “objective reality” operating outside the ken of consciousness and embedded in the material and energetic things involved, allowing for correlations involving “subtle energies” and other causative energies at work in radionics and psychotronics that seem to play a part in both diagnostic and treatment modes.

I will return to my various explanans in upcoming Klimo’s corner installments, but for now I will leave you with just what I’ve shared with you thus far, keeping things mercifully short.”

~~ Jon Klimo

Section IX – In Case You Missed June’s Masterclass #74 -June 27, 2026

Marco Rodin, creator of the Rodin Coil, presented “**The Donut Universe and the Kingdom of Nines**”

Abstract: “The Donut Universe and the Kingdom of Nines”

Learn Spirit Density Mapping: https://bit.ly/Vortex_Math_Intensive

The eternal **DECOQUBIT** is a superluminal hyper-computer that runs on Spirit and possesses untrammelled power!

Spirit is the 5th Force. The numerical formula for Spirit is; *Prime Numbers Squared: The Creation Equation*. This is the GUT equation.

Baha'i Metaphysical Technology.

By decrypting the Most Great Name of God found in the Baha'i Faith sacred scriptures, I was able to create the toroid number map, and tap into the hidden energy in the universe!

Marco’s Bio: Marco Rodin, 69 years young from Tuscon Az, has been on a quest to release the power of the pattern he decoded over forty years ago.

Rodin's "Vortex Based Mathematics" (VBM) is a system that claims to reveal the underlying mathematical structure of the universe, based on the repeating patterns of numbers (1, 2, 4, 8, 7, 5) found in the decimal system, which he links to the toroidal (donut) shape of energy flow.

Yes, this was recorded, and if you missed it, here is how to see it now.

All of our Masterclasses are recorded. The recordings are available:

- To Members – for free – re-viewing on demand, in our Member’s Tab on our [WEBSITE](#)
- To Everyone – for 9.99 each in our [Shop](#) on our Website. Downloadable.

Section X- Special Interest Groups (SIGs)

The USPA is establishing Special Interest Groups (SIGs) so that people with similar interests can get together online or in person to discuss, exchange ideas, collaborate, and do research on topics in the overall psychotronics and "free energy" fields. As is the case with most psychotronics subjects, there is overlap in the various topics, but many of you have specific areas of interest. Listed below are the SIGs that have already been established, along with the leader of each group and contact email address.

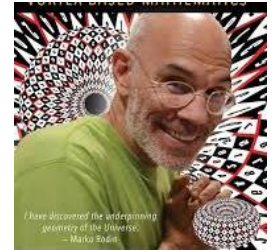

However, if you have a different or a more specialized interest than any of the SIGs listed, and would like us to establish a new group in the area of your interest, please contact the Coordinator, John Reed at: joreed43@gmail.com.

Unconventional and New Energy Systems SIG:

For all those interested in unconventional, new, or "free energy" subjects, including zero-point energy, magnetic field methods, cold fusion/LENR, water as fuel, inventions developed by Nikola Tesla, T. Henry Moray, Stan Meyer, Edwin Gray, and many others. Leader: Toby Grotz. contact email address: tobygrotz@icloud.com

Subtle Energies and Water Activation SIG:

For people interested in all subjects related to quantum biology, water structure, infusion, and activation; infoceuticals, biofields and the aura, biological frequencies, and emanations, biogeometry, crystal energies, qigong, chakras, and electromagnetic fields (EMFs) interacting with humans, animals, and plants; Leaders: Beverly Rubik and Glen Rein: contact email address: brubik3@proton.me

Radionics and Dowsing SIG:

This group is for people interested in aspects of radionics and dowsing, including the kinds of devices used; different ways they can be used, such as to answer questions, enhance health, find things, etc.; learning how to use the devices; learning about the history of such devices, such as the Abrams, Drown, George de la Warr, and Hieronymus devices. Leader: Pete Radatti. Contact email address: pete19428@gmail.com

Scalar and Torsion Fields SIG:

For people interested in ideas, theories, and technologies of longitudinal and scalar waves and fields; torsion and toroidal fields and effects; information energy and fields; superluminal speeds of such waves; Einstein's "spooky action at a distance"; Dark Energy, and the spectrum(s) of these waves and fields; Leaders: Scott Beutlich, Marc Wilson, John Reed; contact email address: joreed43@gmail.com

Section XI- USPA Local Affiliate Groups

The USPA is establishing localized affiliate psychotronics groups wherever our members are located – in the United States and elsewhere in the world. This is so that USPA members and others interested in psychotronics can get together in person, socialize, collaborate, and have speakers make local presentations

These local groups will be independent to give you maximum freedom of organization and activities. These groups can be composed of USPA members, as well as, others interested in psychotronics who may later decide to become members of the USPA. A set of "Guidelines" will be provided.

Listed below are the USPA local affiliate groups that have already been established, with the leader(s) of each group and contact email address. Please contact the leader if you would like to join one of these. If you live in a town or city that is not near an existing local group, and are interested in starting a group in your area, please contact the Local Group Coordinator, John Reed: joreed43@gmail.com

- **Philadelphia, PA, area:** Group name: Conshohocken Radionics Society. Leader: Pete Radatti. Contact email address: pete19428@gmail.com
- **St. Louis, MO, area:** Group name: Aether Force Psychotronics Society (AFPS). Leader: John Ech. Contact email address: operator@aetherforce.energy
- **Los Angeles, CA, Northern suburban area:** Group name: San Fernando Valley Psychotronics Society. Leaders: Dovana Ferguson and John Reed. Contact email address: joreed43@gmail.com
- **Mexico City, Mexico area:** Group name: Psychotronics Association of Mexico City. Leader: Ricardo Morales Mondragon. Contact email address: ricardo.morales.mondragon23@gmail.com
- **Detroit, MI, area:** Group name: Detroit Area Psychotronics Society. Leader: John Reed. Contact email address: joreed43@gmail.com

Section XII- USPA Committees

Name	Chair	Description
Conference		To plan and organize all physical and online USPA conferences, including venue, speakers, transportation, notifications, registration, and other necessary activities.
Membership	John Reed	To recruit new USPA members via advertising, social media, online groups, and other methods.
Social media /PR		To engage in all aspects of publicity, promotion, and marketing of USPA conferences, Masterclasses, and product sales. To establish USPA's presence on all appropriate social media platforms, and help manage postings and replies, as required.
Website	Scott Beutlich and Gail Wind	To develop and maintain the USPA website, initiate improvements, as necessary, and provide oversight of content.
AI and Resource Development	Pete Radatti	To develop an AI search engine for all of USPA books, periodicals, papers, videos, and other items to make them accessible to USPA members.

Chapters		To help establish local USPA chapters in the areas where members are located, as well as, in other cities across the US and world, working closely with the Membership.
Library, Archive, and Museum	John Reed	To identify, acquire, and preserve books, periodicals, papers, patents, and devices related to psychotronics, radionics, radiesthesia, dowsing, and related subjects, and make these materials available to USPA members.
Masterclass Program	Scott Beutlich	To help plan and organize Masterclass events, including contacting potential speakers, scheduling their appearance, and conducting the Masterclasses via Zoom.
Newsletter:	Gail Wind	To assist the USPA Newsletter editor.

MIA “Among the Missing”

Missing People, Organizations, Periodicals, Books, Artifacts, and more in the Psychotronics Field
by John H. Reed, USPA President

This is a new “column” or section of the USPA Newsletter, with the purpose of helping the USPA, as well as our members and research associates, to locate people, organizations, written works, devices, and other items that have seemingly disappeared, or have been extremely difficult to find in the psychotronics field. Updates will be added, and each missing item will be retained in future issues until it is found or otherwise resolved.

In our research and reading, we all have encountered reports or mentions of things of interest that we have tried to find. With our expanding readership, we can all help one another find what we have been searching for. Some may have experience in genealogical research, private investigation, law enforcement, or even intelligence work, which you could use to help with these searches.

This will also serve as a “People Locator Service” to help USPA members find authors, researchers, and other people involved in psychotronics, radionics, subtle energies, free energy, and related subjects. This would include people who have “disappeared” or have died long ago, and whose relatives USPA members may be trying to find in order to preserve the research papers and collection of that person.

If there is anything you have been searching for and need help to find, please write to me at: joreed43@gmail.com, and I will include your search help request in the next issues of the USPA Newsletter. And if you have any information about an item that is listed in this column, please email me and share what you know or your suggestions. Any request for confidentiality will be honored and protected.

Missing Device: Lafferty Radionic Instrument

Does anyone know anything about the Lafferty Radionic instrument? The "Lafferty" in the instrument name, may refer to Tom Lafferty, a recognized radionics practitioner and researcher who has contributed to the radionics field, particularly through patient surveys. It has been reported that Lafferty is associated with the development or analysis of the "Virtual Radionic Instrument" (VRI), which translates traditional, hardware-based radionic methods into computer/tablet software. If anyone has any information about this instrument or its inventor, please contact John at: joreed43@gmail.com

Missing Person: Paul Sauvin

We are trying to track down some of the early directors, officers, and researchers associated with the United States Psychotronics Association (USPA), after it was organized in 1975. Paul Sauvin was a USPA officer in 1996 and 1977. Paul, whose full name is Pierre Paul Sauvin, was an electrical engineer and inventor who, according to one source, worked in the aerospace industry and later with the National Institute for Rehabilitation Engineering at St. Joseph’s Hospital in Paterson, NJ. He also worked with Dr. Carl Schleicher, head of Mankind Research Unlimited, and helped develop a device called the “AGRAD Machine.” This device was designed to control crop insects, and was introduced on an experimental basis, although it is not known if it ever reached commercial production. Paul Sauvin’s mother was Edith Sauvin, who lived in White Plains, NY, and died August 25th, 1987. Edith’s only child was Pierre Paul Sauvin, who himself had 2 sons, Alan Paul Sauvin and Steven Eric Sauvin. He also had one daughter, Jane Elizabeth Sauvin. Any help in locating the children of Paul Sauvin would be greatly appreciated, and please write to joreed43@gmail.com.

Missing Organization and Proceedings: International Association for Psychotronic Research (IAPR)

Does anyone know what became of the International Association for Psychotronic Research? And do any of you have copies of its meeting proceedings? It was founded in 1973. However, the current location or activities of the IAPR are unknown.

The IAPR held numerous international conferences around the world, beginning with its first in 1974 in Prague, then Czechoslovakia. At this conference, Dr. Zdenek Rejdak was elected president for the Eastern Division of the IAPR, and Dr. Stanley Krippner was elected president for the West. The 8th International Conference on Psychotronic Research was held in Milwaukee, Wisconsin, 1993, as a joint conference with the United States Psychotronics Association (USPA), but it is unknown if any subsequent conferences of the IAPR were held.

Proceedings of each of these conferences were published, but the USPA Library only has copies of the second conference in 1976 and the eighth conference in 1993. In addition, the IAPR published a newsletter called Psychotronic. Thanks to the research of Gail Wind, our current USPA Newsletter editor, we have the first issues of Psychotronic through vol.1, no.3-4, 1977, but none after that date.

If you have any knowledge about these organizations, or have copies of the proceedings, or newsletters, please write to John at: joreed43@gmail.com

Section XIII “Members Only” Presentations for Free Online Viewing

One big advantage to being a member of USPA is the “Members” page of our website. (Members Only)

We have over 225 presentations FREE for viewing by USPA members. If you are not a member yet, you can ‘fix’ that in just a few minutes at <https://www.psychotronics.org/join/>

The full list of Masterclasses in the *Members* Tab on the Website was getting unwieldy. Suffice it to say that ALL MASTERCLASS videos are in the Members tab of our website, along with 140 other videos, audios, and publications! We will present only the 10 most recent in this list. For the titles of the rest, you can check our Shop – they are all for sale too! [Master Class Videos](#) for Sale.

THE LATEST (10 of 76) MASTERCLASSES
Masterclass #64 Consciousness Beyond the Conventional: from Spiritus Mundi to Quantum Networks- with Serge Kernbach
Masterclass #65 Using Radionics with Natural Energies for Problem Solving: Agnihotra, Orgone Energy, and More with Dan Mangum
Masterclass #66 Psychotronics: From Old Masters to New Technologies- with Alexander Suprun
Masterclass #67 Geomancy – with Alanna Moore
Masterclass #68 The Art of Prosperity with Justine Bartleywood
Masterclass #69 Why Radionics Works: Understanding Cause Before Effect- with Dale Pond
Masterclass #70 Interview with Nick Franks, Consciousness & The Universe
Masterclass #71 From Scan to Strategy: Turning Subtle Data into Practical Steps with Wolfgang Bucher
Masterclass #72 The Discovery of Our Mathematical Constitution with Sharry Edwards MEd
Masterclass #73 Introduction to Tao Geomancy with Stephen Quong
Masterclass #74 The Donut Universe and the Kingdom of Nines with Marco Rodin

If you are a member: Check out the updated Members Tab: Click this link and log in: [USPA Members Only](#)
Want to JOIN NOW? [CLICK HERE](#) Choose annual or three-year. Special discounts for Active Military and Full Time Students.

Section XIV - The Basics

Editorial Office: USPA Newsletter, C/O Gail E. Wind, 2088 Maple Ridge Road, West Burke, VT 05871.
Email gailinvermont@outlook.com

For immediate assistance regarding all other USPA issues, contact Scott Beutlich, the secretary / treasurer of USPA at uspsychotronics@gmail.com

Manuscript Submission: Submit all submissions as word documents by the 12th of each month to gailinvermont@outlook.com for review for possible publication in the *next month's newsletter*. The USPA Board of Directors reviews all submissions and makes final publication decisions.

Enjoy unique information about radionics, psychotronics and other related topics at USPA's website at <http://psychotronics.org> . Find us on Facebook at: <https://www.facebook.com/uspsychotronics/>

Executive Secretary	Daniel Taylor	Board Member	Beverly Rubik Ph.D.

What is USPA?

The United States Psychotronics Association (USPA) is a federally recognized, nonprofit 501(c)(3) organization founded in 1975 to serve as a focal point for scientific and technical exploration of the universe of esoteric, spiritual, and psychic arts in the United States of America.

The USPA has been hosting annual conferences for its membership since its formation and has featured countless individuals with cutting-edge viewpoints, research, or theories to share, allowing any interested persons to openly discuss their work.

What is Psychotronics?

USPA defines psychotronics as the science of mind-body-environment relationships, an interdisciplinary science concerned with the interactions of matter, energy, and consciousness.

Psychotronics involves the study, research, and applications of the physics and technology of the mind, brain, spirit, consciousness, and the underlying forces of life and nature – hence the term “psychotronics.” A true understanding of the universe must include the spiritual as well as the technical. USPA provides an opportunity for amateur researchers to present their findings along with the professionals.

USPA stresses research, with documentation of results, and practical applications, rather than personal experience and unsupported hypotheses.

Section XV - USPA Donors and Sponsors Recognition

Section XIII- Books for Sale

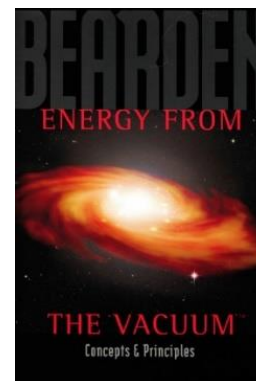

Thomas Bearden's Books Are Available Through USPA

Dana Bearden, daughter of the late Thomas E. Bearden, has opened her private stash of her father's books to USPA! We will be selling them for her on commission and her prices are WAY below eBay, Amazon, Alibris, or anywhere else we've found them.

We have two volumes ready right now, but we'll be adding more soon. Please note: Currently, the prices include shipping for the United States only, but the USPA folks are open to working with people outside the US on an individual basis who are willing to pay the extra shipping, duties and taxes based on location. Contact gailinvermont@outlook.com for a shipping quote.

This is a very new project, for Dana and the USPA, so keep checking. We'll add more Bearden Titles as soon as we can. Find them at <https://www.psychotronics.org/shop/> in the Books section.

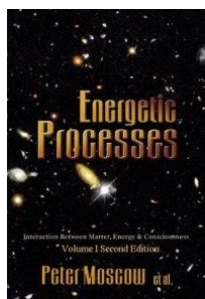

ENERGY FROM THE VACUUM
(Signed or Unsigned)

J.G. Gallimore's Books are Still Available on Amazon - through assistance from USPA

Jerry G. Gallimore was one of the founders of the USPA in 1975, and was a leading researcher in psychotronics and unusual energies until his untimely death in 1989.

All five of J.G. Gallimore's rare books on psychotronics subjects and unusual energies have been reprinted by the United States Psychotronics Association (USPA) and are being made available at a fraction of the cost that used copies were being sold at online. [Available at Amazon.com](#) USPA Shares in the income from these sales.

So rare have these books been, that only a few libraries in the entire world had them in their collections, and some original Gallimore's books were being sold for several hundred dollars each online. However, with these newly reprinted volumes, each will be available for less than \$30.00.

The Handbook of Unusual Energies: Volume 1	ISBN-13: 978-1543024999	The 1st book of 3 on unusual energies	468 Pages
Gallimore discusses in depth the research, discoveries, and inventions of all the major researchers in subtle energies, the aether, biological 62 fields, pyramid energy, radiesthesia, radionics, crystal transduction, and related subjects. These include the works of Baron von Reichenbach's and his odic energy, Dr. Wilhelm Reich's orgone energy, Dr. Harold Burr's biological life fields, Kozyrev's time mirror, Edgar Cayce's transmission of energy, and related research done by many others. Of particular importance is Gallimore's 127-page chapter on radionics. In this chapter he discusses in depth the research and devices of Ruth Drown, T. Galen Hieronymus, Rho Sigma, Dr. L. P. Corte, and other prominent people in the radionics field.			
Collected Properties & Writings of J. G. Gallimore: Volume 2	ISBN-13: 978-1543025040	The 2nd book of 3 on unusual energies	258 Pages
This is the second book in the "Unusual Energies" series that J.G. Gallimore published. It covers			

Gallimore's research on Albert Abrams, the founder of modern radionics, psychological physics, psychic energy, thought resonance, subtle energies, crystals, and related subjects.

In addition, a number of radionics devices are discussed, such as the De La Warr Diagnostic Instrument. And very helpfully, the rates are provided for substances, body organs, and medical diseases and disorders. I very interesting interview of Christopher Bird, conducted by J.G. Gallimore is provided, as well as a discussion of Walter Russell and his research

**Relationship Between
Parapsychology and Gravity: Vol. 3**

ISBN-13:
978-1543024944

The 3rd book of 3
on unusual energies

228 Pages

This book describes in depth the research and theories of J.G. Gallimore into the question of "parapsychology transmission" -the question of how such things as telepathy, remote viewing, ESP, and similar phenomena can physically occur. He discusses the various emanations, radiations, and energy fields of all matter and life including the ancient Chinese energy called "chi" (qi), the ancient Indian's prana energy, Reichenbach's "odinic force," Gurwitsch's "mitogenic radiation,"

Wilhelm Reich's orgone energy, and other subtle energies. He shows how these energies are similar, how they interact, and how they are related to gravity. He also discusses crystals as transducers of these energies, and provides diagrams of devices that could potentially be used to harness or control these energies.

**Transverse Paraphysics: The New
Science of Space, Time, and Gravity
Control**

ISBN-13:
978-1543024920

Gallimore's
fourth book

374 Pages

This book covers the visionary research and theories developed by J.G. Gallimore about anti-gravity, space, time, and biophysics. He discusses in depth the dimensions of space, time, and gravity, and new discoveries in each of these areas. In addition, he covers research being done on anti-gravity and then discusses anti-gravity patents that have been obtained.

He also discusses the intriguing concept of aura energy fields surrounding humans and other living things, and how extra-sensory perception (ESP) might be explained through biophysical principles.

**Unified Field Theory Research Book:
Using Subjective Response to Psi-Plasma**

ISBN-13:
978-1543024838

Gallimore's Fifth
book

134 Pages

This book is about psychotronics, radionics, electromagnetic fields and waves, psi-plasma, plasma fields, subtle energies, bio-electromagnetic energy, and other unusual energies emitted by living and non-living things. It also is about how living things interact with and are affected by these energies, which may enhance or harm health.

AS PAUL HARVEY WOULD SAY, "AND HERE'S THE REST OF THE STORY!"

Kent State's Unknown Emissary to The Heart of the Sixties- Stanley Krippner

[You may remember him from our June 2024 Masterclass # 55, "An interview with Renowned Parapsychology Researcher Stanley Krippner." This is an excerpt from a ten page article. The rest is at the end of this newsletter!]

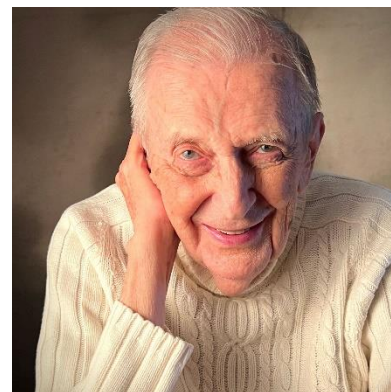

by Allen Bukoff (PhD, 1984, Psychology, Kent State University)

If you've ever been a student, faculty member, or support staff at Kent State University, I think you'll enjoy learning about Stanley Krippner ... especially if you were part of or have an interest in the intellectual and cultural revolution we now call "The Sixties." He's had an amazing career and life, and Kent State played a big part in helping to get him going! At the age of 93, Stanley is still active and professionally engaged. Last year, 2025, he had twelve new articles published. We're calling him "unknown" because it appears that very few Kent Staters have ever heard of him!

Stanley Krippner has had a knack for being in the right place at the right time, meeting and working with some of the most important people who helped shape modern psychology. A few quick examples: Stanley Krippner was an early and active participant and leader in Humanistic Psychology and the Human Potential Movement – major intellectual and academic forces on a global scale. He was a participant in Timothy Leary’s pioneering and famous Harvard Psilocybin Project. He helped open up new frontiers in psychological research. Along the way, he met and worked with some of the most important cultural change agents of the twentieth century -- people like Albert Ellis, Carl Rogers, Timothy Leary, Alan Watts, Ken Kesey, the Merry Pranksters, and The Grateful Dead. We’ll share more about these encounters below, and if, after reading what we have here, you want to know more, please seek out his website or his autobiography. Immediately below, we present a quick and condensed review of Stanley Krippner’s professional career and its beginnings as a faculty member at Kent State.

A Summary of Stanley Krippner’s Professional Research Interests

Most research psychologists pick an area or topic, and spend most of their careers carefully and methodically digging into it. Stanley Krippner has had a wide-ranging curiosity and has applied established psychological research methods to a broad array of topics. Clinical interests have included reading difficulties, autism, gifted children, and post-traumatic stress disorder. During his time at Kent State, his interests expanded, eventually leading to research on dreaming, hypnosis, human creativity, consciousness, psychedelic experience, human potential, shamanism, and parapsychology. These latter phenomena had been mostly ignored by the academic psychologists who embraced Behaviorism -- the dominant school of thought in psychology from the 1920s into the 1960s. By applying sound, established research methods to these topics, he helped to expand the scope of psychological research and to bring credibility to the study of these phenomena – a loosening and opening up in academic psychology that reflected the spirit of The Sixties.

Ten most frequent keywords in Stanley Krippner’s publications

In the titles of his articles	Most frequent co-occurring words	In the names of the publications
dream	state consciousness	Psychology

hypnosis	content analysis	Psychic

A content analysis of the ten most frequent keywords in the titles and sources of Stanley Krippner’s publications performed using Julius AI

Dr. Krippner has published more than 1600 research studies, books, and reviews. As just one example, he co-edited the award-winning book, *Varieties of Anomalous Experience: Examining the Scientific Evidence*, published by the American Psychological Association in 2000 and reissued in a second edition in 2014. A comprehensive list of his publications can be found on his website,

A Summary of Stanley Krippner’s Professional Career and Honors

Before earning his PhD in Educational Psychology from Northwestern University in 1961, he worked as a speech therapist in public schools in Illinois and Virginia. His first job after receiving his PhD was in the School of Education at Kent State University, where he was a faculty member and Director of the Child Study Center from 1961 to 1964. He then moved to New York City to become Director of the Dream Laboratory at the Maimonides Medical Center from 1964 to 1973. Dr. Krippner moved to San Francisco in 1973, where he became the Alan Watts Professor of Psychology at Saybrook University. Saybrook -- founded in 1971 in Pasadena, California -- specializes in humanistic psychology and offers a range of master’s and doctoral programs in fields

like psychology, counseling, and social work. Since 2018 he has been Associated Distinguished Professor at the California Institute of Integral Studies. Throughout his career he has also served as an Adjunct or visiting Professor at more than a dozen universities, colleges, and institutes around the world. Dr. Krippner has also been an active participant and leader in more than a dozen professional psychological organizations -- serving as president of two different Divisions of the American Psychological Association -- the Society for Humanistic Psychology (Division 32, 1980-1981) and Society for Psychological Hypnosis (Division 30, 1997-1998).

Dr. Krippner has been widely recognized and honored for his work. As a peer-nominated and elected Fellow of the American Psychological Association, he has been recognized for outstanding contributions having national impact in five different areas or Divisions of the APA. A few of his other major later career awards include the Outstanding Career Award from the Parapsychological Association (1998), an Award for Distinguished Contributions to the International Advancement of Psychology from the American Psychological Association (2002), a Lifetime Achievement Award from the International Association for the Study of Dreams (2006), and an Award for Distinguished Lifetime Contributions to Humanistic Psychology from the American Psychological Association (2013).

Stanley Krippner and Kent State

When Stanley Krippner came to Kent State in 1961, he taught undergrad and graduate courses in the College of Education and became the Director of the Child Study Center.

Tests Aid In Reading

There is hope for the child who "just can't learn to read." That is what many anxious parents and school authorities have learned since the establishment of the Reading Center at Kent in 1956.

Headed by Prof. Stanley C. Krippner, elementary education, the center every year assists dozens of Ohio students in solving their reading problems. This community service is a major function of the center in addition to its primary task of training reading specialists for work in Ohio schools.

"Reading is a highly complex function," says Prof. Krippner, "and our first job is to determine by a series of tests where the trouble lies."

THESE TESTS take some 12 hours to administer and are given in three or four sessions by the center's specialists. Where psychological disturbances, poor eyesight or hearing are indicated, the center refers the child to specialists in these fields.

"The diagnostic tests, combined with information secured from interviews with parents and teachers, usually enable us to determine the nature of the problem," Prof. Krippner explains, adding:

"THE PROBLEM may be lack of motivation or interest, unfavorable educational circumstances such as poor reading materials, large classes, poor teachers or home environment. Once our specialists have completed their findings, a case report is made out which recommends remedial action."

The center is also concerned with aiding specially gifted children by setting up programs designed to make the most of their talents.

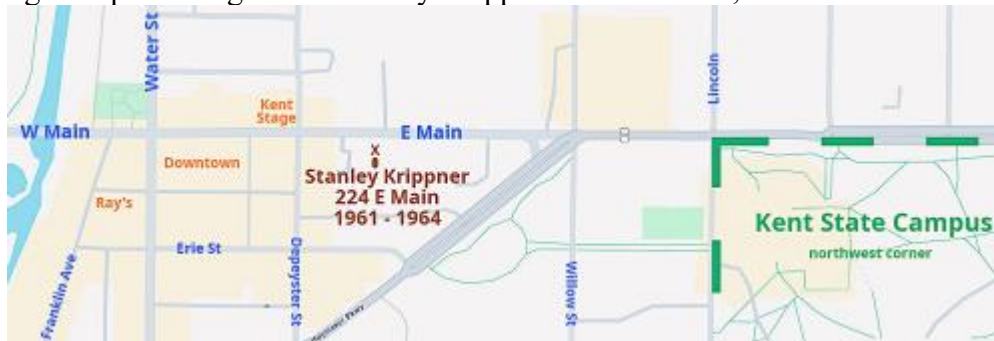

Daily Kent Stater
Jan 17, 1962

Stanley Krippner testing a young client at the Kent State University Child Study Center, 1963.

Stanley lived in Kent from 1961 – 1964, close to downtown – just over a block east of the downtown Main and Water street intersection, almost kitty corner to the old movie theater (now Kent Stage).

Google map showing where Stanley Krippner lived in Kent, Ohio

In his autobiography, Stanley cites several experiences during his Kent-Ohio period that had a major impact on him and his career. During one of his first encounters at Kent State, Krippner met with Dwight Arnold, the founder of Kent's school counselor program. Arnold was excited about a new book that Carl Rogers had just published, *On Becoming a Person: A Therapist's View of Psychotherapy* (1961). This was to become Roger's most important and influential work in which he outlines his theory of personality, his client-centered approach to psychotherapy, and ideas on personal growth and self-actualization that helped establish him as one of the leaders of Humanistic Psychology – something that was becoming a new and influential force in 20th century psychology. Krippner writes "I immediately ordered the book and it changed my life, introducing me to an

important (and essential) aspect of humanistic psychology.” Stanley became an early promoter of these new ideas at Kent State by incorporating these ideas into the first two graduate courses he taught (Sources of Occupational Information and a Counseling Practicum). One of his earliest lectures at Kent State, in August 1961, “New Frontiers in Counseling and Psychotherapy,” discussed Rogerian counseling, Albert Ellis’s Rational Emotive Behavior Therapy, Existential psychotherapy, and hypnotically facilitated psychotherapy -- topics to which the graduate students in the class had not previously been exposed.

Even before reading *On Becoming a Person*, Krippner had met Carl Rogers in 1957, when Rogers was a visiting professor at the University of Wisconsin. Over the years their paths kept crossing, most notably through their mutual involvement with the Association for Humanistic Psychology and the Esalen Institute. Esalen is the famous educational retreat center in Big Sur, California, considered the birthplace of the human potential movement. It’s been a place for workshops, personal growth, and spiritual and psychological exploration since its founding in 1962. Dr. Krippner was a regular presence at Esalen over many decades, leading seminars on parapsychology and anthropology.

The Harvard Psilocybin Project

Here’s another example of Krippner’s ability to be in the right place at the right time. Just after arriving at Kent State, he attended the September 1961 convention of the American Psychological Association in New York City. One of the symposiums he attended was a panel discussion about the “Sacred Mushroom.” This panel included the following speakers: Timothy Leary, a Harvard research psychologist and author who became a leading advocate of psychedelic drug use, Frank X. Barron, a pioneer in the psychology of creativity and one of the first contemporary psychologists to study effects of psychedelic drugs, William S. Burroughs, a primary figure in the Beat Generation who influenced literature and popular culture, and Gerald Heard, a historian and philosopher whose interest in consciousness and psychedelics influenced Aldous Huxley to write about his mescaline experience in *The Doors to Perception*. During the panel discussion Leary described the Harvard Psilocybin Project.

Stanley had been interested in the effects and potential benefits of psychedelics on human consciousness since reading an article in Life Magazine, *Seeking the Magic Mushroom*, in 1957. The panel discussion in New York further stimulated his curiosity, and when he was back in Kent he began corresponding with Leary to see if he there was some way that he could participate in the Harvard Psilocybin Project. Leary invited him to come to Harvard and to participate – on the condition that Stanley passed their physical and mental health screening tests for the project. In March of 1962, Stanley Krippner took a break from Kent to spend a few days in Cambridge to become a participant in this research. This experience had a major influence on Stanley’s career-long interest in psychedelics and psychedelic research.

At a dinner party at Timothy Leary’s house the night before taking psilocybin, Stanley met Alan Watts who was visiting Leary from San Francisco. Krippner was already aware of Alan Watts, having read and absorbed his book, *The Way of Zen* (1957). This was the beginning of Krippner’s long friendship and professional collaboration with Alan Watts that later brought them both together again in faculty positions at Saybrook University where Krippner served as the Alan Watts Professor of Psychology. Another event during the 1961 Harvard visit is worth mentioning. A friend of his took him to hear Jack Kerouac talk at one of the student dorms at Harvard – Kerouac’s book, *On the Road* (1957), made Kerouac one of the leading voices of Beat Culture.

Stanley Krippner’s participation in the Harvard Psilocybin Project gave him direct, eye-opening, personal experience with the effects of psychedelics on human consciousness. It solidified his professional intention to be part of the scientific exploration of the potential benefits of psychedelic experience. Stanley did do some additional psychedelic exploration at Kent State with Morning Glory tea (described in a publication in 1968). During his long career he has conducted a variety of research studies and written numerous articles on psychedelics, their relationship to creativity and artistic activity and their use in shamanistic cultures.

Did Stanley Krippner’s participation in the Psilocybin Project have any influence on anyone at Kent State? Stanley remembers talking to some of his colleagues and students about it at the time, but this was when news of tribal shamans’ use of psychedelic mushrooms was more of an anthropological curiosity than an available experience. This was more than a half a dozen years before recreational LSD use, and San Francisco’s Summer of Love captured national attention. Stanley gave at least two talks at Kent about his participation in the Harvard Psilocybin Project. One was to a group of students at one of the campus dorms in 1963, and the other to a group

of friends and colleagues in 1964. Both talks were organized by Alex Gildzen, an undergraduate student who later served as the long term Curator of Kent State University's Library's Special Collections Department.

Child Study Director Talks About Drugs

Stanley Krippner, director of Kent's Child Study Center, will speak on the effects of certain new drugs at 6:30 tonight in the Stopher Hall Lounge.

Krippner, an assistant professor of elementary education, will speak on "The Delights and Dangers of Psychedelic Drugs: Tallycumb, Mescaline and LSD." His speech is being sponsored by Stopher's cultural committee.

THE PROFESSOR'S academic use of such drugs has been the topic for several papers. He has read before the national conventions of the American Psychological Association,

the National Association for Gifted Children and the National Educational Research Association.

Krippner's article "Can Hypnosis Help Your Child Learn?" appeared in "Family Weekly" this past summer. He has also published in "Vocational Guidance Quarterly" and "Education."

AN UNDERGRADUATE at the University of Wisconsin, Krippner received his MA and PhD degrees from Northwestern. He is a member of Phi Kappa Phi, honorary scholarship and leadership society, Delta Sigma Rho, honorary speech and forensic society, and Phi Delta Kappa, professional education society.

KRIPPNER

Daily Kent Stater Nov 3, 1963

Notice how "psychedelic" and "psilocybin" are spelled here.

Stanley Krippner, Gardner Murphy, and leaving Kent for the Maimonides Medical Center Dream Lab

Another early and long-term influence on Stanley Krippner was Gardner Murphy. Murphy was an American Social Psychologist who served as head of the American Psychological Association in 1944, helped inspire the rise of Humanistic Psychology, and was one of the first established psychologists to do research on parapsychological phenomenon. Krippner first met Murphy when he was in graduate school when Murphy gave a seminar in the Psychology Department at Northwestern. This was the beginning of Krippner and Murphy becoming close friends and colleagues. Murphy secured the funding for the Dream Laboratory at the Maimonides Medical Center, and helped recruit Stanley Krippner to move to Brooklyn, in 1964, to direct it.

Social science research and systems thinking: Stanley Krippner, Donald Campbell, and Ludwig von Bertalanffy

Here's another example of Stanley Krippner's ability to meet major influencers who then introduced him to other major influencers (like Timothy Leary introducing him to Alan Watts). While in graduate school at Northwestern Stanley started a lifelong friendship with Donald T. Campbell while attending Campbell's seminars in Social Psychology. Campbell was one of the most influential Social Psychologists and social science research methodologists of the 20th century, and served as President of the American Psychological Association in 1975. Campbell helped instill in Krippner an appreciation for rigorous research methodology. Campbell personally introduced Stanley Krippner to the Austrian biologist Ludwig von Bertalanffy when Bertalanffy was visiting Northwestern University, and urged him to attend Bertalanffy's invited talk on General Systems Theory. General Systems Theory is an interdisciplinary framework that views complex natural phenomena as interacting systems, and processes, that follow some basic universal principles that appear across biology, sociology, psychology, and physics. Krippner's early exposure to systems theory and systems thinking gave him a sophisticated and useful way to approach complex dynamic systems. Systems thinking provides a way to comprehend and handle many different interacting variables and has the potential to provide a broader and deeper view of psychological and cultural phenomenon than the simple linear cause-and effect models of behaviorism. An appreciation for both rigorous social science research methodology and general systems thinking were among the influences that Stanley Krippner brought with him to his first academic job -- and to his students -- at Kent State. They continued to be major themes and principles throughout his entire career.

Stanley Krippner and the Vietnam War

On April 15, 1967, Stanley Krippner participated in one of the earliest and largest Vietnam anti-war protests in New York City. The anti-war movement grew and spread across the country and especially on college campuses. On May 4, 1970, the conflict between the government, and the people opposed to the war, produced one of the darkest episodes in modern American history -- 28 Ohio National Guardsmen fired 67 rifle rounds into an unarmed crowd of Kent State students peacefully protesting the Vietnam War, killing four students, and wounding nine others. Instead of stifling anti-war protests, this incident triggered massive demonstrations involving over four million students at several hundred universities. Stanley's fond memories of his time at Kent State and his continuing personal connections there made this news especially painful. Stanley has another connection to the politics surrounding the Vietnam War, Daniel Ellsberg, the author of *The Pentagon Papers*.

Leaked to the New York Times, the publication of this information in June 1971 exposed decades of government deception about the war, fueled the anti-war movement, and accelerated U.S. withdrawal from the war. After publishing *Secrets: A Memoir of Vietnam and the Pentagon Papers* (2000), Ellsberg gave Stanley Krippner credit for giving him advice that helped him write this book.

As an example of Stanley Krippner's skills in designing research and his ability to capitalize on opportunities, let's take a look at the context, design, and results of one of his most interesting dream telepathy studies conducted during his time in New York.

Research: Stanley Krippner, the Grateful Dead, and psychedelic telepathy

One of the things that happened to Stanley after leaving Kent State to do research on dreaming at the Maimonides Medical Center in New York City is that he became involved with the Grateful Dead. Stanley met Mickey Hart, one of the Grateful Dead's drummers, at a party in 1967. When Hart learned about Stanley's interest in, and research, with hypnosis, Hart asked him if hypnosis could be used to make him a better drummer. This led to a collaboration with Hart and the Grateful Dead's other drummer, Bill Kreutzmann. Hart and Kreutzmann worked with Stanley to use hypnosis to help them better synchronize their drumming. Working with these two, and attending Grateful Dead concerts, Stanley became familiar with the other members of the band.

In 1971, at the suggestion of Jerry Garcia, Krippner got the band and their audiences to participate in a "pilot study in dream telepathy" during a series of six concerts at the Capitol Theatre in Port Chester, NY. Krippner and Garcia wondered if the high emotional intensity of the concerts – facilitated by the typically high incidence of psychedelic use among the Grateful Dead audiences -- might promote telepathic communication. Stanley designed a careful study to see if Grateful Dead audiences could influence the dreams of two people who were considered to be "psychic sensitives." One of them had his dreaming monitored by EEG while sleeping at the Dream Laboratory at the Maimonides Medical Center, and the other "receiver" slept at home.

Before each night's concert one image of art was randomly selected to be the image to be projected to the audience at 11:30 pm that night. Four of the six art images used in the study are shown below. Each night the selected image was projected onto a large screen at the Capitol Theater for 15 minutes. The audience was instructed to use their minds to "send" the image. The audience was given the name and location of one of the psychic targets, the one whose sleep and dreaming was being monitored by EEG at the Maimonides Dream Laboratory – 45 miles away. The other receiver and her location were not mentioned to the audience. Approximately 2000 people attended each night's concert, and widespread use of psychedelics among the audience was observed.

times
then

The two
"receivers" were
awakened several
each night and
asked again in the
morning to

dreams they were
transcripts. Two
compared each

having. Each receiver's nightly dream descriptions were turned into outside judges read each of the "telepathic receiver's" six descriptions, description to the six projected images, and then rated how well each description seemed to reflect that image. The two judges ratings were combined and used to determine hits and misses – whether a dream description correctly aligned with that night's projected image or not. For the telepathic receiver of whom the audience was unaware, only one of her six descriptions was judged to match the correct image. The probability of one match out of six possible matches is the result one would expect if the dream descriptions were random, and totally unrelated to the images used. The telepathic receiver who the audiences had been asked to focus on, however, gave dream descriptions that were judged to match the actual image that was shown that night, on four out of the six nights. The statistical probability of getting four out of six correct hits, if the descriptions were random, is $p < .008$, easily surpassing the traditional criteria for statistical significance. This carefully designed field study, therefore, provided some evidence (although not definitive proof) that a large group of people at a rock concert,

under the influence of psychedelics, may have actually influenced the dream imagery of one of the two psychic sensitives in this study. The fact that the receiver on which the audiences had been directed to focus their thoughts had statistically significant success in describing the correct images suggested that this “targeting” might be an important variable in this type of communication. Although this was an interesting, and carefully conducted field study, it should be noted that most of Dr. Krippner’s research on dreaming was conducted under even more rigorous laboratory conditions at the Maimonides Medical Center (see *Dream telepathy: The landmark ESP experiments. 50th anniversary edition. 2023.*)

Krippner moved to the San Francisco area in 1973 to work at the newly formed Saybrook Institute. Through the Grateful Dead, he then met many of the people who had helped create the San Francisco hippie and psychedelic scene, whose music and human consciousness explorations have influenced people and cultures around the world.

California: Owsley Stanley, Ken Kesey and the Merry Pranksters, and Albert Hofmann

In San Francisco, through the Grateful Dead, Dr. Krippner became acquainted with Owsley Stanley, an audio engineer and clandestine chemist. Owsley played a pivotal role in the San Francisco Bay Area hippie movement during the 1960s. One of Owsley’s roles was as a sound engineer for the Grateful Dead. He recorded many of the band’s live performances and also developed the Grateful Dead’s Wall of Sound. His biggest role and largest impact on the rise of San Francisco’s hippie and psychedelic culture, however, earned him the nickname “Acid King.” Owsley was the first known private individual to manufacture mass quantities of LSD -- more than five million doses. He provided free LSD at the “Acid Tests,” a series of parties, and Grateful Dead concerts, in the mid-1960s. These “Acid Tests” created a collective psychedelic experience, merging music, light shows, and the effects of LSD to create a unique, experimental, and immersive experience. The acid tests were originally organized by The Merry Pranksters, a group led by Ken Kesey -- the author of *One Flew Over the Cuckoo’s Nest* (1962). The Merry Pranksters spread their psychedelic counterculture across the country with a famous bus trip in 1964, documented in Tom Wolfe’s book, *The Electric Kool-Aid Acid Test* (1968). This collaboration between the Merry Pranksters, Owsley Stanley, and the Grateful Dead had a major influence on the development and spread of the hippie counterculture movement – many of whose values aligned with the Human Potential Movement. What they created has continued to influence western and global culture in many ways. Not surprisingly, given his interest in consciousness and culture, Stanley Krippner also sought out and became friends with the Merry Pranksters (particularly Ken Kesey and Mountain Girl). Living in the San Francisco area and teaching at Saybrook gave Stanley Krippner the opportunity to be active in the west-coast organizations, promoting and supporting the humanist movement, that were headquartered in California -- including the Association for Humanistic Psychology, the Association for Transpersonal Psychology, and the Esalen Institute.

After moving to California, Stanley Krippner also became friends with Albert Hofmann, the Swiss chemist who accidentally discovered the psychedelic effects of LSD-25 in 1943. They first met at a conference at the University of California Santa Cruz in 1977. They were both members of a symposium titled *LSD: A Generation Later*, which included many prominent figures in the psychedelic world. Over the years they appeared at many symposia and conferences together. Stanley visited Hofmann at his home in Basel, Switzerland, in 1973 and was one of the featured speakers at the conference honoring Hofmann’s 100th birthday in 2006. It may be worth noting that Stanley Krippner’s lifelong interest in LSD did not involve personal recreational use. Although Stanley engaged in psychedelic use a handful of times in his career – starting with the Harvard Psilocybin Project in 1962, it was always in the context of research. He has been careful to maintain a scientific-observer perspective enhanced by a small number of direct personal experiences.

Stanley Krippner and PTSD

One of the threads running through Stanley Krippner’s interest in educational counseling, humanistic psychology, consciousness, psychedelic experiences, dreaming, and parapsychology has been a desire to find ways to help people -- to help them heal, grow, and realize their potential. His contributions to understanding and helping those suffering PTSD are outstanding examples of this work. Stanley’s first exposure to those suffering severe psychological trauma was a cousin who had survived a Japanese prisoner of war camp in WWII. The recognition of what came to be called Post Traumatic Stress Syndrome (PTSD), among many Vietnam War veterans, motivated Stanley to become involved with research into PTSD, and PTSD therapy. His research, and insights in working with combat veterans are summarized in *Post-Traumatic Stress Disorder* (a book he co-

authored in 2012), a comprehensive and thoughtful examination of the nature, causes, and treatment of PTSD. Stanley's background in dream research enabled him to pioneer the use of dream therapy to benefit PTSD sufferers. Just as Stanley had been an early advocate of not stigmatizing autism as being a "disorder," he has promoted the view that spiritual and psychological strengths can emerge from PTSD therapy.

Stanley Krippner and Shamanism

In conjunction with his laboratory research on dreaming and parapsychology, Stanley has had a career long interest in shamanism, and its connection to psychotherapy, and healing. Krippner has observed and worked with shamans and their communities in South America, and other parts of the world. He has studied the shamanic rituals, and healing practices that rely heavily on imagery and altered states of consciousness, as well as how shaman use dreams as tools for guidance, diagnosis, and meaning-making. One of the shaman Krippner collaborated very closely with was the Native American shaman Rolling Thunder (a connection facilitated by the Grateful Dead's drummer, Mickey Hart). Krippner and Rolling Thunder's grandson wrote two books that brought Rolling Thunder's shamanic views and practices to the public.

Dr. Krippner has mentored other academic researchers who have gone on to expand the research on shamanism, and to bring shamanic practices to the west. One of his PhD students, Alberto Villoldo, a medical anthropologist and psychologist, has been a leading pioneer in bringing shamanic practices, and energy work – from the Peruvian Andes and Amazon -- to more than 10,000 people around the world. Villoldo's, Four Winds Society -- a research and educational organization -- has been called "the Harvard of neo-shamanism."

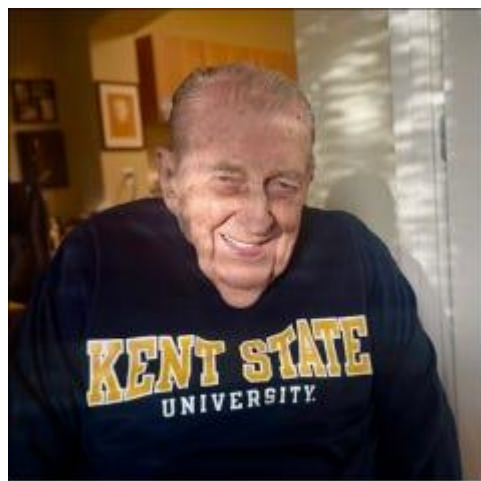

What Stanley Krippner can mean for Kent Staters

The story of Stanley Krippner's career and his connection to Kent State has the potential to provide Kent Staters with a very positive – previously unknown -- connection to the cultural revolution known as The Sixties. Although this period has been criticized for some of its excesses and for some of its leaders, and was shunned for a while by both the government and academia, Stanley Krippner has survived as a great example of a scientist who has persistently, carefully and open-mindedly explored the various realms of human consciousness looking for ways to use this knowledge to help, and benefit, his fellow humans.

What's Stanley Krippner up to these days?

Last year in Denver, Stanley Krippner joined Michael Winkelman in making a research presentation at the Psychedelic Science Conference, *What Traditional Entheogenic Healing Practices Can Teach the Psychedelic Renaissance about Optimal Set and Setting*, where Dr. Krippner was given a standing ovation.
