

UNITED STATES

PSYCHOTRONIC ASSOCIATION

Non-Profit Organization

\$2.50

Fall 1983

NEWSLETTER

Vol. IV Number 3

THE 1983 ANNUAL CONFERENCE OF THE ASSOCIATION WAS HELD IN JULY AT THE UNIVERSITY OF PORTLAND IN PORTLAND, OREGON. THE CONFERENCE WAS ABLY HOSTED BY THE LEWIS & CLARK CHAPTER OF BEAVER CREEK, OREGON. NEW OFFICERS AND DIRECTORS (LISTED ON PAGE 2) WERE ELECTED TO SERVE THE ASSOCIATION IN THE COMING YEARS.

MEET THE NEW PRESIDENT, THE REV. HENRY NAGORKA:

REV. NAGORKA CHATS WITH RILEY CRABB OF BORDERLAND RESEARCH IN THE CONFERENCE "BOOKSTORE"

USPA CONFERENCE
JUNE 27--JULY 1, 1984
OGLETHORPE UNIVERSITY
ATLANTA, GEORGIA

Non-Profit Organization

United States Psychotronic Association

Board of Directors:

Thomas Bearden '84
Ivan Kruglak '84
Samuel Lentine '84
Robert Beck '85
Peter Kelly '85
Elizabeth Rauscher '85
Rita Fryer '86
Kathleen Joyce '86
Edwin Skilling '86

Officers:

Henry J. Nagorka--Pres.
J.G. Gallimore--1st V.P.
Elizabeth Rauscher--2nd V.P.
Kathleen Joyce--Exec. Secy.
Robert Beutlich--Secy.--Treas.
3459 Montrose, Chicago, IL
60618 (312) 478-7715

AIMS

1. To promote the free exchange, discussion and dissemination of information, theories, ideas and practices related to psychotronics.
2. To maintain high standards of ethics, humanitarianism and scientific practices in the study and application of psychotronics.
3. To preserve the history and genealogy of psychotronics.
4. To secure cooperative action in advancing the common cause of its members.
5. To disseminate information of a general, economic, social or governmental character, to analyze subjects relating thereto, and to secure and present the views of its members to other organizations, the government, and the public.
6. To cooperate with other organizations of like interest.
7. To further the training and education of its members.
8. To promote standardization in the investigation, testing, reporting and evaluation of psychotronics.
9. To provide in its periodical(s) a national forum for the report and publication of all worthy activities and projects of persons, groups or organizations working in the field of psychotronics.
10. To make awards, locally and nationally, to persons, associations or agencies, in recognition of outstanding contributions or accomplishments in the field of psychotronics.

MEMBERSHIP

The U.S. Psychotronics Association, incorporated in the District of Columbia in August, 1977, is empowered to enroll members in the parent organization and to develop chapters throughout the nation.

Six categories of membership are open to the imaginative individual who wishes to join with the U.S.P.A. on the new frontiers of science in working constructively for the qualitative improvement of man and his environment.

1. General--\$20.00 per year (any citizen of the United States).
2. Family--\$25.00 per year (includes all members of one immediate family).
3. Affiliate--\$13.00 per year (any firm, corporation, or organization). Non-voting.
4. Student--\$10.00 per year (any full-time student attending an accredited educational institution; or member of the Armed Forces of the United States).
5. Fellow--\$40.00 per year (any U.S. citizen active in Psychotronics, deemed eligible by the Board of Directors).
6. Honorary--No fee (granted for life by the Board of Directors for outstanding service).

AT THE CONFERENCE:

Prof. Walter Uphoff (U. of Wis.) describes the paranormal events captured on film in a completely closed fish tank

Dr. Andrija Puharich describes his most recent discovery of using oxygen therapy for complete resission of cancerous tissues

Gary Fleck demonstrates the use of crystals in healing

AT THE CONFERENCE :

**Tom Bearden and his dynamic presentation on
"The New Electrodynamics"**

**Ed Skilling, one of our new directors, demonstrates
the "Lil ELF" stimulator to Sue Wallace, practitioner
and lecturer on Magnetic Healing**

SUBTLE ENERGY AND THE CHAKRAS

E. James Faubel and James E. Faubel

When one gets involved in Radionics or Psychotronics one begins to hear terms such as "Subtle Energy," "life fields," etc. We have a tendency to think that research into subtle energy is something new...part of the "information explosion" we have been experiencing in the last few decades. Actually, the only thing new about this research is the instrumentation and the publicity.

The ancients had different names for subtle energy and the subtle energy bodies of man, but they were talking about the same things we are. Their research also had a different emphasis than ours. While we use our research primarily as a tool for balancing the energy of the body, or for affecting other aspects of our physical environment, such things were only of secondary importance to the ancients. Their primary purpose for research into subtle energy was religious...i.e., to assure themselves of a happy life after death, to commune with the gods, and to return from their explorations of the "Inner or Heavenly realms" with information important to the survival of their community, religious or national.

Such books as The Tao of Physics and The Dancing Wu-Li Masters have shown that what we call "modern" or "new" physics was known to ancient researchers. It has frequently been asked how the ancients could have known about such things as astrophysics, embryology, biochemistry, creation and evolution, cosmic rays and force fields, harmonics, resonance, solar energy, and even "modern" psychiatric techniques such as music and color therapy, play therapy, etc. The answer lies in the Subtle Body and its means of perception. Using the sensing abilities of the subtle body, the Mind of man can investigate all levels of life -- organic and inorganic. The best Psychotronic instrument is Man with his various bodies and mind. These bodies can generate, receive and transmit a multitude of different rates of vibration of energy...all under

the control of the mind. Of course, whether we are talking about matter or Spirit we are talking about the ONE UNIVERSAL SUBSTANCE which contains an infinite range of vibratory frequencies. For the purpose of analysis and discussion, the ancients subdivided this infinite continuum. The most common is three divisions. Sometimes this trinity is further subdivided, resulting in $3 \times 3 = 9 + 1$ (the original Monad) making 10 in all (the Holy decad of Pythagoras). Most of us are familiar with the Septad (division of 7, the six points of the Star of David plus the Central Point, the original Monad or God). The Trinitarian Formula is the most common and is reflected in such traditions as: three worlds -- spirit, soul (or mind), and body; three divisions of the cosmos -- Heaven, Earth, and Hell; 3 centers of the body -- Brain, Heart, Generative organs; 3 in One (Trinity); 3 chambers in the Pyramid; 3 degrees of Freemasonry; 3 sections of the Temple (Outer Court, Sanctuary, Holy of Holies); 3 elements of Alchemy -- Sulfur, Salt, and Mercury; 3 temptations of Christ; 3 Gunas -- Tamas, Sattwa, and Rajas; 3 poles in electricity -- positive, negative, and neutral; 3 parts of the atom -- electron, positron, and neutron; 3 tests of initiation -- water, air, and fire; 3 types of signs in Astrology -- cardinal, fixed, and mutable. The Trinitarian Formula for man is usually given as causal body, subtle body, and physical body. The subtle body of each of us is interconnected with all life on this planet, including what has been called the World Soul. Through the World Soul we are connected to all life in the Solar System, and through the Solar System to all life in the universe.

It is by means of the subtle body that the Ego can become aware, through imagination, of all levels of life -- organic and inorganic. Here the imagination must be distinguished from Fancy. Imagination proper is Inner Vision...seeing into the Inner Planes, not "making things up." The

physical body is an organ of the subtle body just as the subtle body is an organ of the causal body. The subtle body is not the aura. The aura is produced by the interaction of the physical and subtle bodies. However, by viewing the aura one can diagnose physical, emotional, and character problems. Physical illness/conditions ALWAYS show up in the aura or "life-field" before physical manifestation. The subtle body is called the Matrix of the physical body...i.e., it guides the birth, growth, health or illness, and eventual death of the physical body and survives the body. The subtle body, too, is temporary compared to the causal body (unless perfected/purified... then it becomes a permanent part of the causal body...home of the Reincarnational Ego). The Causal Ego is known as the Watcher or Witness of all experience and sensation. The physical body is the apparatus of sensation. Once all karma is extinguished, all three bodies are discarded by the Immortal Self. (The causal body is frequently called immortal...but it is only immortal compared to the physical and subtle bodies. After all, there is IN REALITY only One Self.)

All three bodies are material (i.e., belonging to the material universe of Force and Form). Only the physical body is perceptible to the physical senses. The subtle body can be and has been perceived by what are called the psychic senses. The causal body can only be perceived by the Mind. The mind is not the Self. In some systems, an extra body is added called the mental body, thus making four bodies of man. Other systems divide man up this way: physical body, etheric body, astral body, mental body, causal body; thus making five bodies in all. All these divisions are really rather arbitrary and are used only for the purpose of analysis and description.

REVIEW OF TRADITIONS REGARDING THE SUBTLE BODY IN THE EAST AND THE WEST

A. East: The various names given to the subtle body in the Eastern traditions would be meaningless to a Western audience. But they can all be translated as

"Subtle Body" or "Body of Light." The Tibetans call it the "Rainbow Body." It was taught that the subtle body reflected the general health and character of the individual and that strong emotions, traumatic events, etc., can cause more or less permanent disruptions in the subtle body. They taught that the subtle body was affected from above (the Causal Body-Seat of the Higher Mind and reincarnational memories), from within (thoughts and emotions), and from below (The physical body and etheric double). The Yogis effected changes in the subtle body and its centers (chakras) by the use of sound (mantra-chanting-music) and color (symbols -- either visualized in the mind's eye or focused upon with the physical eyes) in combination with concentrated attention. When purified or perfected, the Subtle Body is called the Diamond Body.

B. WEST: Written traditions in the West regarding the subtle body and its centers go back to the ancient Egyptians -- almost 5,000 years. The Greeks learned of it from the Egyptians and later from India as well. The subtle body is usually known as the "Body of Light" or the Astral Body, Radiant Body, Glory Body, Robe of Glory, etc. The 7 metals of Alchemy refer to the 7 main chakras of the subtle body; and, again, sound and color were used to effect changes in the subtle body...not to "change lead into gold," but to discover and purify the hidden gold (the chakras) within the lead (the physical body). It was believed by the alchemists that the lower chakras contained "impurities" caused by impure thoughts, words, and deeds. By concentrating high vibrational energy (i.e., "light") upon the lower centers their impurities were revealed and removed and they then tended to operate at higher vibrational rates than previously. It was believed that the physical body could also be transmuted so that the adept could use it for several hundred years if necessary. The religious use of this research in the West was first of all to provide positive, experimental evidence of life after death. Although cases of spontaneous Astral projection or out-of-

body experiences have occurred throughout history, the Western and Eastern masters sought to develop the skill so they could consciously leave the physical body to explore the Inner or Higher Planes.

A major objective of the ancient mystery religions was to stimulate/train their initiates into having a conscious out-of-body experience. The observation was frequently made that Death and Initiation were the same thing...i.e., the release of the subtle body from the physical...death was a permanent separation, while Initiation was a temporary separation. This is what the Sufis were referring to when they admonished their students to "Die before you die." When pure or perfected, the Alchemists called the subtle body the Philosopher's Stone.

Because of the great secrecy surrounding initiation in the Mystery Religions of the Greco-Roman world, only hints were given of the ultimate Secret...the out-of-body experience. However, in the Eastern literature we have the Tibetan Book of the Dead, the Bardo Thodol. The descriptions in the Bardo bear a marked similarity to some experiences had by some individuals under the influence of LSD or by those experiencing out-of-body phenomena. But the greatest similarity is to the descriptions given by patients who have returned from a clinical death.

However, for those of us who are not seeking religious experiences or wanting to explore the "inner planes," the most useful information provided us by the ancient researchers is about the chakras...the subtle energy centers of the body.

According to Hiroshi Motoyama, in his book Theories of the Chakras: The chakras/centers are energy transfer centers -- they convert mental energies to physical energies (and vice-versa).

Using a system of four bodies, the physical body is only one-fourth of the whole person. You are as well the mental body (thoughts and cognitive mind), the emotional body (feelings and desires), the etheric body (memory, subconscious, and superconscious). The chakras are energy centers which act somewhat like coordinators among the energies of the whole body. In the physical body they are

attached through the central nervous system and the endocrine system. If the chakras are blocked or clogged, the proper flow of energies is restricted, with resulting dis-ease and/or misalignments.

The Heart chakra is often polluted with fear, hatred, or greed. The result is an energy blockage which affects other body systems. Negative frequencies such as jealousy, greed, hatred, or suicide thoughts can cause a heart attack. Oxygenated blood from the lungs first passes through the heart before nourishing the body system. It is vital that the heart chakra be clear and un-polluted.

The Throat chakra is located along the spine at the physical throat level. This is a powerful chakra which can release such energy (good or otherwise) through the spoken word. Negative toning, such as gossip, cursing, criticism, or sarcasm increases negativity in the sender and the receiver. The throat chakra is a command center for life forces and it sets the tone for our personality. Both the Old Testament and the New Testament warn about "unseemly conversation;" we also are accountable for "every idle word." For many people words have little value, except to manipulate others or to express anger and negativity. The throat chakra must also be clear and positive, with a purity in our speech which strengthens and tones this energy center to enable it to function properly in the system.

The Solar Plexus (Sun) center is located at the navel level and becomes noticeable to us when we become agitated and feel the discomfort in the pit of the stomach. Or, in other cases of anticipation we feel "butterflies" in the stomach. The throat and solar plexus chakras are connected, so that negative speech affects the solar plexus area to some degree. When the spoken words (power) are positive, the energy moves the solar plexus chakra to act in harmony, and the energy moves into the heart chakra with positive effect.

The Brow chakra (third eye) is usually called the center for spiritual visualization. Through exercising the spiritual (seeing the good in others), we strengthen this chakra and cleanse it of negative

energies. Another method to strengthen this center is to meditate on pure white light, or perfect geometric forms.

The Sacral chakra is located at a level halfway between the navel and the base of the spine. It governs genetic and heredity factors. This chakra is considered to be the seat of the soul and the creative center, which may be distorted or purified by the environmental factors we assimilate or accept through the various body senses. Because of the great amount of distortion, pollution, and negativity which exists in our environment, it requires discipline to reject the negative and concentrate on beauty, symmetry, and the higher consciousness. There are also psychotronic measures which assist in tapping into the higher consciousness.

The Crown chakra regulates the mental faculties and memory. It is located at the top of the head; it is the center through which God-consciousness flows. If it is clogged with nonsense, drug energy, overabundance of concrete or mechanistic thinking, or strictly intellectual pursuits, there is little opportunity for spiritual development and awareness, as well as good memory faculties.

The Base chakra (root chakra) is located at the base of the spine. The life force (Kundalini) of this chakra is designed to move upward through the other chakras by meditation. Visualizing the I AM presence magnetizes the energy upward. Perversion of the life force energy will contaminate the other chakras. Misuse and abuse of the Kundalini energy decreases the necessary flow of pure energy to the chakra system. The usual reaction is disease, early aging, and early death.

For the practical-minded, the action of cleansing the colon and eliminating toxins from the blood and digestive systems through good nutrition, fasting, herbal remedies, or bio-electromagnetic means provides supplemental assistance in cleansing the chakra interrelationships.

What is needed for maximum efficiency of the whole person is integration and balance of the bodies, and especially the energy centers which regulate subtle body energies. In an effort to validate the chakra information and balancing of the whole body theory, a research project was

outlined to measure the effect of stimulating (energizing) the chakras in relation to the energies of certain historically associated organs or glands.

The research project involved a random sample of 20 specimens supplied by interested persons. The specimens were saliva samples in sealed containers which only the subject had touched. Using a rate (wave numbers) from a manual containing accepted rates, the first step was to establish the vitality amplitude at the beginning of the 25-day period of research, and record this next to the subject's coded number. Then a reading was taken and recorded for the subtle energy amplitude for each of the seven major chakras. The third reading necessary was to record the subtle energy amplitude of the etheric body organ or gland which is historically associated with each of the seven chakra or energy centers. This became somewhat problematic, since there was more than one historically acceptable association. One system states these relationships:

Root Chakra : Adrenals
Solar Plexus : Pancreas
Throat Chakra: Thyroid
Crown Chakra : Pineal
Sacral Chakra : Gonads
Heart Chakra : Thymus
Brow Chakra : Pituitary

This particular association was the one most used by the "experts," although some referred to the root chakra as the base chakra. Also, some added to the list of associations, such as Brow: pituitary, ears, lower brain; Throat: thyroid, lungs; Heart: thymus, heart, blood; Solar Plexus: pancreas, stomach, liver, gall bladder; Base: adrenals, spine, kidneys. Actually this system implies that the added etheric organs or glands will reflect the energy level of the major chakra and its primary etheric glandular counterpart.

In our research we used only the primary etheric gland association, since this was a first project along this line, and in accordance with the Law of Parsimony -- "the simplest approach is often the best." Each day for 25 days we set the

accepted rates for the seven major chakras in the measuring instrument and put the switch on output, with each of the 20 specimens, one after another. Between each subject we neutralized the specimen cell to insure independent energy records. We did not make any effort to research the etheric glandular amplitude, but agreed to wait until the 25-day period ended and see what instrument readings would be recorded, and if any significant improvement was apparent in the subtle (etheric) energy level of the glands as a result of dealing only with the transmitting of energy to the chakra centers for 25 days for one minute each day.

The results of the research are presented herewith:

In every case (all 20 subjects) the chakra energy amplitude increased over the 25-day period. When the amplitude readings for the historically associated etheric organ or gland was measured after 25 days, with no energy input except to the chakra centers, in every case there was a significant increase in subtle energy amplitude. Theoretically, this indicates that energy input to the chak-

ras has an effect on certain organs or glands at the etheric level. A logical assumption, but without verification, is that increasing the chakra center energy status not only increases the organ or gland energy at the etheric level, but may also improve the energy level of the organ or gland itself.

Further research, in concert with the organized medical establishment, could provide empirical evidence to support the above assumption, or disprove it. The problem appears to be one of finding researchers without a biased opinion regarding the outcome, and who would be willing to work with each other harmoniously. The authors recognize the limited scope of this particular experiment, but present it as an incentive to others who may have larger populations to sample and more time available, plus a scientifically structured procedure to follow. The actual research time in measuring and recording this experiment was approximately 90 hours, and another several hours in planning, reviewing, and writing the report. Hopefully, enough interest will be generated for others more qualified to expand upon the hypothesis researched, and report their results.*

=====

AT THE CONFERENCE :

Lis Lissant, who is correlating music and new physics, demonstrates with live and recorded passages of both original and classical music

THE ULTIMATE COMPOUND -- LITHIUM

(In Solid Matter/Crystals)

(Digest)

Haroldine

We are "front seat" witnesses to the rapidly approaching dawn of a New Age upon this planet. I feel this lithium information is both very important and essential to be shared now, as it shall ease research work for many of you by providing short cuts and more complete explanations that weren't as clearly available before. So many times, what would seem to benefit us the most if we had known first, we seem to learn last. I greatly feel this is so of lithium and its vast balancing results when appropriately utilized. I take full responsibility for the theories, conjectures and context offered in this presentation.

The majority of the information shared with you is very generalized. Should you choose to later utilize it in your own research, I caution you to remember that each human being is an individual. CHECK and RECHECK -- there is no single blanket coverage for everything. Thereafter, through association and appropriate application, you can garner only very beneficial results.

Lithium is a white non-metallic metal occupying position #3 following hydrogen and helium on the Periodic Chart of chemical elements. The atom has three protons in its nucleus and three electrons in orbit around the nucleus. One of the electrons is alone in the outer orbital and so is readily lost to interactions with other atoms. When it is lost, the lithium atom has three positive charges in its nucleus and two negative charges in its electron shell and is hence a cation: a positively charged ion which interacts with anions (negatively charged ions). In the synthesis of heavier chemical elements out of lighter ones in the universe, lithium is not on the main pathway; therefore on the earth it is present in smaller quantities compared with its chemical relatives sodium, po-

tassium, magnesium and calcium. At ordinary temperatures lithium has a higher specific heat than any other substance except water. It is unusual in that it is the lightest of all solid elements. It is never found free in nature, though traces of it occur in nearly all igneous rocks and in the waters of many mineral springs. In the flame test for lithium, a brilliant magenta color is given.

Lithium is found widely distributed in the earth's crust as lithium minerals in deposits, largely silicates, of pegmatites dikes on specific ley lines of the Planetary Grid surrounding the globe. Sources of lithium minerals in order of importance are North America, Africa, South America, Australia, and Europe.

The commercial use of lithium in earlier years was mainly in the ceramic industry for producing glazes and specific grades of glass, and in the automotive industry as an additive to keep oil from breaking down. During WWII it was used on submarines to neutralize possible escaping chlorine gas. Lithium has been used for many years in the manufacture of pharmaceuticals such as the antihistamines because of its stability advantage, and as a reagent to produce synthetic vitamins. To a limited extent, lithium is used in the metals industry in various alloys, increasing tensile strength and resistance to corrosion. It is used to purify helium and argon by removing nitrogen and oxygen, and is now being utilized in batteries for wrist watches and pacemakers.

In the medical field, the use of lithium carbonate for treatment of manic-depression has been reported as being very successful. Within the last three weeks (June 1983) there have also been large successes reported in treatment with the same substance of individuals addicted to alcohol. American physicians

were excessively cautious because of disastrous results when applications of lithium were substituted for sodium in treatment of congestive heart failure. Several patients had died before physicians recognized the toxicity of lithium in a patient deprived of sodium. Because of this misfortune, lithium's use in the United States was delayed approximately ten years.

In esoteric writings, it is stated that the planet Neptune rules the 3rd Eye (6th Chakra) and its metal is lithium. This opens the pathway to higher consciousness or more "human potential release." Lithium is an important constituent of every cell in a healthy human body. It is utilized in the building fibre of cell walls and is one of the main ingredients in the covering sheath of outgoing nerve endings. Lithium is the primary ingredient of crossover from etheric to physical in human formation via the conception and governing meridians. This has been checked and confirmed by several radionic practitioners. This is newly-discovered information in Acupuncture, though this art has been practiced for over 5,000 years. When the atomic bombs were dropped over Japan in 1945, the residue product remaining after the hydrogen and oxygen atoms were smashed together at great pressure was lithium. Is it possible that the success of Japan's technical progress could have been influenced by the lithium materials floating downward through space to their islands? Lithium ore dust is being used as part of the material for dental fillings. It assists in keeping patients' meridians aligned.

Toward the end of a TV program I was watching almost five years ago, a statement was made that strongly called my attention, that "fresh water pools rose up out of the salt water in an area around Bimini. Folks who bathed in these fresh water pools had their skin cancer healed within days. When the fresh water was analyzed, it was noted it contained a high percentage of lithium."

Until that moment in time, I had never even heard the word "lithium" and had no idea what it meant. That began the quest to know and understand lithium: First the dictionary and then a visit to local rock

shops. At a large local lithium mine, the main attraction at the tailings dump was the search for tourmaline -- a precious gemstone containing 1 to 1 1/2% lithium. Tourmaline is used in nuclear submarines and warheads as well as in jewelry since it is the second fastest conductor of electricity upon the planet, being surpassed only by the human mind. There were huge piles of lovely blue/violet "rocks" all around the tailings dump that everyone seemed to ignore. The color of their beauty strongly attracted me and so began my love affair with lithium crystals/ores/minerals. I took varying samples home and had Kirlian photographs taken. The ore's energy was strong enough to show up on a finished printed photograph as three tiny magenta-color, heart-shaped figures from the sample of blue/violet ore called lepidolite.

I remembered reading in a book called Vibrations about the color teachings and writings of Dinshah and the special value of MAGENTA: "The two remaining colors, green and magenta, form the 'North' and 'South' poles respectively of the circle and constitute not affinities but dual primal forces of the same energy working as a single factor, like the poles of a magnet. Dr. MacNaughton refers to them as representing the 'Primary Force' and 'Kundalini' respectively." This was a silent signal that there was something very special about this ore energy, and so began the "lithium project." [Magenta color represented "primal ground force vital energy!!!!"]

The foliage around the mine and tailings dump was exceptionally tall, large, and very green, whereas other local plant growth was 12" - 14" stubble. In a nearby garden, the tomato plants were over ten feet tall and the corn stalks towered at twelve feet. This was in the latter part of October when the normal growing season had long since ceased. Something special had to be affecting the ground for this type of plant growth to occur. I started using some of the lepidolite crystals as a type of fertilizer on my patio and sent similar crystals to fellow researchers around the U.S. to note effects in their areas. At the same time, I recorded research data for work done with avocado

groves in Fallbrook, California. The lithium ore was encased in cloth wrappings and secured 360 degrees outside around the irrigation pipes which watered the groves. One grove was watered separately with a different pipe and kept as a control. The water rushing through the pipes created an energy current which picked up the "frequency" charge from the lithium crystals. The main important changes noted were that the blossom set increased from 75% to 90%, and the nutritive value of the fruit improved approximately 22% in just a three-month period. The control grove became pleasantly contaminated in a positive way as the healthy charge from treated groves leached over. This was our first recorded experiment on the contribution of lithium crystals to agriculture.

Concurrently, appropriate application with lepidolite crystals was tested with human energy and effects were noted which greatly contributed to balancing or centering. Because lithium has a right of left polarity swing, a multitude of results were noted merely by carrying crystals in a left-hand pocket. Hyperactive children acted more relaxed or calm, as crystals afforded more grounding energy support. Some of the lepidolite crystals were ground into a dust-type substance and sprinkled on a drop of colorless nail polish in the center of each toenail, providing a grounding support energy for up to two weeks. Individuals with a fragmented-type personality also blended more toward center/balancing with the lepidolite crystal grounding support. Some of the lepidolite ore was sewn inside 1 1/2" cloth squares and research volunteers carried them on their person or slept with a packet tucked under their pillows. (I suggest maximum exposure to any crystal be limited to 18 hours per day in the aura or 8 hours if sleeping with the crystal's radiation. The body needs a certain amount of time every day to be totally alone with itself.) One volunteer, a female approximately 55 years of age, insists that wearing the cloth packet in her left bra cup cured her constipation problem. Another volunteer, a male aged 42 who truly fitted the title of "Space Cadet," upon carrying a packet in

his left pocket became more grounded, relaxed and balanced in his everyday functions in his occupation and in his family life.

William Conners, who had done vast research work with tone and number harmonics, found that lithium has a fundamental harmonic which resonates with every note of the musical scale. I feel this is why lithium offers such diversity in its many varied areas of application.

Lepidolite was found to resonate with the 5th or throat chakra. (The thyroid/throat area is where all the electric potential is stored for the physical body.) An eight-year-old psychic male child stated that lepidolite "calls the healing angels for human beings," and quartz crystals "call the healing angels for plants."

Professor Louis C. Kervran performed research work in France over the last 25 years (he died in February, 1983) on a subject he referred to as "biological transmutation." He discovered that in nature a property of matter is the phenomenon that transmutation occurs. One natural element can change into another. The results obtained have nothing to do with nuclear physics, since biological transmutation involves neither fusion nor fission. Kervran referred to it as a science different from chemistry, preceding chemistry or the molecular state. Prof. Kervran's hypothesis of transmutation -- that there is always a modification in the nucleus of an atom equal to the displacement of a hydrogen or oxygen nucleus -- suggests a new insight into the role of both these vital elements. Those familiar with Dinshah's discoveries and writings know that over 50 years ago he expressed his theory that the only two true elements were oxygen and hydrogen; at that time Dinshah was not 100% sure that even hydrogen was a true element.

After working with lithium crystals and observing their effects, I feel hydrogen is more a transitory state and not an element in our presently known definition of an element. I strongly feel and again mention that lithium is the main connection from the etheric on into the physical plane and is the primary formation of human life via our nervous system -- the

"entrance in" so to speak. The "entrance back out" is an adequate lithium supply in the system to allow the natural opening of the 3rd Eye -- our pathway to higher consciousness or more "human potential release." "Hang-ups" or subconscious "fears" lessen the lithium production by the anatomy, and various forms of self-destruction replace the higher consciousness possibilities. The ingredient lithium is to the human body as a wick is to a candle: One still has to light the flame, but the basic ingredients must first be available for a flame to burn. Aldous Huxley's Doors of Perception may offer insight to research specialists presently working in this area. It has to do with how adrenochrome is broken down and transmuted by the body. Those of you familiar with Nicola Tesla and who have read his biography Prodigal Genius -- were you not curious as to why Tesla developed his habit of hyperventilating in early youth and continued doing so all his adult life? I feel Tesla was transmuting his own lithium manufacture to keep his higher consciousness pathway door clear and open. Somehow I feel that by his hyperventilating he burned up impure carbons and sulphure which otherwise might mineralize, causing complications and collecting in the physical anatomy, creating "short circuits."

I forewarned at the beginning that I was offering very general information. Those of you who are specialists and experts should now have some very specific "seeds" to pursue answers which will greatly benefit many of mankind. Lithium offers many, many solutions to a vast range of human imbalances -- it can restore balance and health.

During the four-plus years of the "lithium project" we found seven individual lithium crystals which could mechanically activate the seven major chakras. These lithium crystals also assisted the volunteer researchers in specific areas

with problems they had not before been able to solve. (Seldom is there a single problem in the physical body; very subtly it's but an indication of inter-connection to misaligned nerve connections and the most severely afflicted areas focus first.)

The individual crystals are:

- 7th Chakra - Rose-lepidolite
- 6th Chakra - Tryphane
- 5th Chakra - Lepidolite
- 4th Chakra - Kunzite,
(Pala Pink) Tourmaline
- 3rd Chakra - Petalite
- 2nd Chakra - Royal Azel
- 1st Chakra - Hiddenite

Approximately three months after completing the series of seven individual lithium crystals to mechanically activate the seven major chakras, a single crystal came forth which did the work of all seven within a 24 hour period. It is called "Golden C." It is a combination of both lithium and beryllium from freak deposits in nature. It was named by a lady in San Anselmo for its rarity; it cannot be found described in any gemstone book. Its radiation color is pure gold light. It also affords marvelous assistance in ridding the aura of "Uninvited Guests" and releases them to "LIGHT." It does similar things for radionic instruments.

There are many more uses and applications for lithium/crystals -- today I wished to present a general overview of what are already available as "tools" which may assist the suffering human being toward balance, naturally! There is a vast range to be explored in lithium research which will bring forth almost immediate solutions compared to "tools" we've had to work with in the past. Specialists in the field of research will be aided greatly by allowing lithium to fill in some of their blanks.*

PSYCHOTRONICS, PYTHAGORAS AND PLATO

(Abstract)

Kathleen Joyce

The thinkers of the Pythagorean/Platonic school had a view of the world which lends itself as a coherent background for explaining the phenomena of psychotronic rates. For many people, the psychotronic rates they utilize on their instruments are an empirical fact, but the theory of how and why the rates work is missing.

This paper describes the Pythagorean-/Platonic world view as a framework for answering these questions.

Pythagorean thought involved number, pattern, geometry, form, relationship, and music...all subjects of interest to psychotronic researchers. Number is, of course, present in the rates used on psychotronic instruments. Pattern and geometry are certainly present in the Malcolm Rae cards. Form is affected by psychotronic treatment through the effect the treatment has on the pattern or etheric body. Relationship between psychotronic treatment and effects in living organisms has been scientifically established. Music has definitely been proven to affect plants and human beings, for better or worse.

There is the implication in Pythagorean philosophy that "the forms of thought are the laws of form and that that through which the mind understands is one with that through which the world is created, so that knowledge of the mind is knowledge of creation." The modern psychotronics practitioner would probably agree with that point of view, as would the many new-thought healers and practitioners. Other cultures have realized the importance of thought in the creation process much more than we have.

Philolaus states that "everything that can be known has a number, for without number nothing can be thought or known." Is this not similar to our belief today that a psychotronic rate, which is number, can be derived for anything?

He is also quoted as saying "number fits all things into the soul through sense-perception, making them recognizable and comparable with one another, in that number gives them body." What does a rubbing plate on our instrument allow us to do but to tune in via sense-perception to a higher field of awareness or knowledge? Does it not allow us to recognize conditions and to compare them with one another?

The last part of the quote states that number gives things body -- or makes them materialize from the unseen into the open. This has also been demonstrated in the field of psychotronics by both Ruth Drown and George De la Warr with their psychotronic camera apparatus.

According to Pythagoras, occult mathematics, astronomy and geometry formed a triad which was the basis of all other arts and sciences. The Pythagoreans put together prophecy and symbolism to give us a ritual of number. Pythagoras was versed in astrology and music as well as mathematics. He discovered that beneath musical sounds there was a mathematical arrangement of harmonic intervals. Pythagoras used music to cure illnesses.

Plato greatly valued Pythagoras' teachings and included them in his Republic and in Timaeus. The theory of archetypes, for which Plato and Aristotle have received credit, was basically derived from Pythagoras' teachings. According to this theory, all things on earth are reproductions or shadows of a divine pattern which already existed. This certainly correlates with our ideas in psychotronics of tuning in on an ideal etheric pattern of a healthy organ and then checking a specimen to see how much the deviation is from the ideal.

Pythagorean thought can be summarized as the inseparable relationship between field-frequency and form, through the principle of resonance. Which sounds very much like psychotronics!†

THE DEVELOPMENT OF THE CRYSTALLINE-MAGNETIC PSYCHOTRONIC INSTRUMENT

Charles F. Whitehouse, D.C.

The first radionic instrument I came in contact with was in 1953 at the National College of Chiropractic. It was an Ellis Micro-diameter, which happens to be listed by the FDA & AMA as an instrument of quackery. All I was told at that time was that when I became a senior they would show me how it worked. They did say you had to have a special sensitivity to operate it. By the time I became a senior, it was no longer a relic of mystery on a school shelf. It was gone.

My next encounter was a story which appeared in Saga magazine in 1970 or 71 dealing with a Hieronymus instrument called the "doomsday machine." I obtained a copy of the patent and had two electronic specialists try to build the instrument. This took place in Charlevoix, Michigan. Three years later I had the pleasure of meeting Galen Hieronymus in my office in Virginia Beach, Virginia. I told Galen of my attempt to construct one of his instruments and he explained that in the patent he had purposely left parts out so that "some fools couldn't duplicate my equipment." I still have it partially constructed.

In Va. Beach at an A.R.E. conference for Chiropractors I met Father Ansil Ober, a Catholic priest who practiced homeopathy and built and used the "Mark Gallert" type of radionic device. He and some of his fellow priests built these instruments in their workshop. That's the type of priest I call an "advanced thinker." The Gallert instrument has 45 dials arranged in 5 rows of 9 each. It has the usual wall and color light treatment box on the left side and the rubbing plate mounted on the right side. The plate is usually made of Brazilian or East Indian rose wood. I talked Father Ober into teaching me and selling me one of these instruments. It is truly a love affair which has been going on for ten years.

Each builder of instruments develops his own procedures and programs, following some patterns which are shared by all. So I followed my instructions very

carefully and damn near wore my left hand and arm off by placing the I.D. rate of the organ, gland or tissue on the instrument before I would try checking it out. I did this for a couple of years before it dawned on me to just think about the organ, gland, person, place or thing and let the mind settle into the mind matrix and obtain a proper rate. Once I passed into this phase I started revamping all my rate sheets and procedures. Once you learn to ask the right questions you can venture into no-man's-land and set up new boundaries, new borders and greater horizons for yourself. Radionics is truly an extension of your mind.

In 1978, after a long conversation with a good friend of mine -- Captain Robert Skillen -- concerning application for government use of an instrument, I decided to build one basically for surveillance purposes. We wanted to incorporate all the potentials which existed in present radionic devices and add new concepts to increase the capability of the new instrument and the operator to the maximum potential. So the best place to start a relationship like that is to sit down at your instrument and start asking questions. How can we improve the receptivity of the instrument? What size instrument are we talking about? What type of switches? What is the configuration of the instrument? Etc., etc.

One of the first changes we made was in the rubbing plate, by increasing the thickness from 1/8 inch to approximately one inch, and cutting on the undersurface a six-pointed star with a 1/2 inch cavity. This increased the energy flow by 225 units of energy on the surface of the plate. I sent one plate to Mark Gallert and he seemed to think it was an improvement over the original equipment because he didn't get as fatigued from using it. Out of 40 different types of material, white oak was selected for the cabinet. The instrument is approximately three feet high, two and one-half feet wide, and eighteen inches in depth. The wood,

being 3/4 inches thick, makes the instrument weigh approximately 99 pounds.

We placed three induction coils into the front of the instrument, thereby eliminating the well type of approach. The switches were modified by placing 13 four-pole magnets of 333 gauss each on a rod attached to the switch. The 13th magnet is in a fixed position while the other twelve rotate, creating a torque in the magnetic field. The magnets were staggered with 3 positive poles on top at the #6 number position, followed by 3 negative, 3 positive, etc. This increased the sensitivity of the instrument's coupling with the mind. Edgar Cayce maintained that if the magnets were too high a gauss that it would prevent the broadcasting of energies, as it creates a locking-in within the instrument itself. Each switch is a 12-position switch which makes a resounding click as it is turned. It aids in knowing subconsciously what number you are tuned into when you lose your stick or get it, as the case may be. I have built the instrument from an operator's point of view.

Back to the rubbing plate. The advantage of the East Indian rose wood type of plate is that stroking the plate with the fingers stimulates the sense of touch and creates an audible, squeaky sound, thereby utilizing two senses rather than one from less vibrational material. Cayce maintained that stroking the plate was a very effective method of pouring energy from the operator through the instrument to the patient, place or thing.

We called our first instrument the Jeana 1 Model. The Jeana 2 Model had a few additions. In the upper chamber we placed a four-sided faceted quartz crystal encircled by three separate coils to create a piso-electric effect on the crystal. This created a force as a result of the crystal discharging its energy onto a 44 millimeter crystal ball, which in turn reflected the crystalline energy through an induction coil containing a Polaroid photo of the subject being treated. In other words, we bathe the photo with ethereal energies. The induc-

tion coils are approximately 9 inches long and 4 inches in diameter. We found that one of the advantages of using the coil device was that we could treat 6 to 8 photos per coil, permitting the treatment of 24 people at the same time. The switches could be programmed to do two separate functions at the same time.

Also incorporated into the circuitry on the coil aspect was an electrostatic charge. Again this creates another effect on the photo-energy field and consequently over the subject. The electrostatic charge intensifies the actions of the mind program through the photo connection.

The Jeana 3 Model has been 2 1/2 years in construction. Presenting a new concept in Psychotronic construction, the instrument is 6-sided, with 56 switches creating various pattern potentials and combinations of energies. The crystal effect is slightly different in that the crystals are 6-sided and faceted, within a 3-ring coil device to create the desired piso-electric effect. There are mirror reflectors placed behind the crystal ball to re-reflect the energies through the coil device and over the photos. The switches in the Jeana 2 and Jeana 3 Models vary to a slight degree. We have six rotating magnets on one fixed magnetic with an electrostatic coil 2 1/2" in diameter superimposed over the shaft of magnets. There is a rather large electrostatic coil within the housing of the six-sided instrument.

All this adds up to a rather interesting instrument. The differences lie in the type of energy capable of being focused through the instruments. One of the main differences is the time factor. Some of the programs which would normally take 3 hours, 33 minutes to treat now take 6 minutes. We have cut the time factor immensely.

In the future lies an instrument we call our Beamer device, designed as a broadcast unit to affect the masses. It can be beamed from satellite connections or reflected off the surface of the moon. †

RADIANT ENERGY FROM THE COSMOS

(Abstract)

Dan Winter

The author mentions Dr. Nikola Tesla's electric car, which ran on "free energy," or as Dr. Tesla put it, on "a mysterious radiation that comes out of the aether." He goes on to illustrate, but not detail, an energy translator, and presents results of an experiment conducted over a year previously.

When the input voltage is increased over a certain threshold, there is a sudden rise in the output voltage from zero to approximately six times the input voltage. The output, which is a high voltage signal composed of high voltage spikes, causes a Geiger counter to display an over-range condition on the highest scale. The effects monitored by the Geiger counter, which cannot be shielded as normal radiation can, are a special form of energy which is NOT the dangerous variety of radiation associated with atomic energy.

Where does the energy which operates the device come from? Dr. Tesla discovered that the cosmos is filled with energy. The problem for the student of free energy is the identification of Tesla's energy which fills the cosmos. The question can perhaps best be answered by looking at the theory of the electron included in a paper published in 1928 by Dr. P.A.M. Dirac, a mathematician and physicist at Cambridge University. The author presents a detailed summary of the theory and related experiments, as well as an explanation of "Dirac Matter" -- an ocean of electrons which fills the cosmos. The Dirac Matter fills the cosmos in the same manner as, and is the source of, Dr. Tesla's energy.

The energy existing in the Dirac Matter has been demonstrated to be zero-point energy, which appears in any physical system because even at the lowest energy level the system can have, there is a residue of energy left. This small amount of energy or residue is called zero-point energy because it is independent of temp-

erature and persists down to absolute zero. It has been calculated that the total zero-point energy in one cc of space is equal to the energy available in a million million tons of uranium!

Even though there are vast amounts of energy in the Dirac Matter, only very small amounts have been demonstrated. A screen or barrier insulates us from this immense sea of energy: At any point in space, the forces exerted by the Dirac Matter converge equally from all directions, effectively canceling each other and permitting very minimal leakage.

The author goes on to explain that energy may be pulled from the Dirac Matter by use of an electric current generated by the very strong electric field of a gamma ray, and describes a device which can produce vast amounts of energy -- more than enough to run Dr. Tesla's electric car!

The paper is presented to stimulate the practical application of the concepts involved, which are over thirty years old. There is a distinct possibility that nuclear war could be precipitated by an energy crisis. The quality of world civilizations is declining because of energy shortages. This is the time for greater world cooperation in developing energy self-sufficiency. The necessary condition for world energy self-sufficiency is free energy.

The way to develop free energy is clear. It requires a cooperative effort with others and less ego involvement with the products of our minds. It is a hard road to follow, but it is a sure one.

In summary, the Dirac Matter is a source of free energy. A special electric current is necessary for any transfer of energy between our physical world and the Dirac Matter, but the free energy contained therein can be tapped. The theoretical framework presented in this paper will hopefully stimulate practical experiments.*

+++++ ===== +++++ ===== +++++

Interdimensional Sciences has recently published two new manuals for use in conjunction with psychotronic instruments. Book I is a primer, consisting of articles which provide an excellent history of radionics from its original development by Abrams to present-day theory.

Book II is a working manual. It includes all the rates from the current Interdimensional Sciences manual plus hundreds of additional entries. Several new features have been incorporated:

NEW FEATURE: Numerical Listing.

All diagnostic rates in the alphabetical section are listed in numerical order, from 00-00.5 to 99-XX -- an invaluable aid in scanning.

NEW FEATURE: Rates from Delawarr Laboratories.

The rates in this section are a combination of existing variable capacitor-type psychotronic tuner rates and rates converted from the De la Warr listings.

These rates are grouped by anatomical function and are much more detailed than those to which we have become accustomed, and should prove to be valuable additions to the rates in the other sections of the book.

NEW FEATURE: Anatomy Pictures.

Simplified anatomical drawings are included for those who are not too familiar with how the human body is put together. A short bibliography of books on anatomy is included.

PRICE: For price and availability write to Interdimensional Sciences at P.O. Box 167, Lakemont GA 30552.

- G-5 B. Stillings - Baaken Library, Medical Archives, Radionic History
- G-6 Haroldine - Lithium, The Ultimate Crystal Compound

- G-7 Robert Beutlich - Genetic Code from the Kabbalah
- G-8 Dr. C. Whitehouse - New Designs in Radionics Using Crystals

- G-9 J. Freidenstein - Energy Towers & Agri-Radionics; and Keynote Speech
- G-10 Peter Kelly - Report & Update, Interdimensional Sciences

- G-11 General Meeting USPA, 1983: Election and Discussion
- G-12 Panel Discussion: "Where Do We Go From Here?--Rauscher, Beck, Bearden, Arul, Bise, Puharich

- G-13 Bob Beck - Neuro-Electric Therapy; Micro-Electronic Brain Tuners Might Be Tomorrow's "Miracle Cure" Black Box

- G-14 J. G. Gallimore - Solid State Psychic Sensor
- G-15 Dr. Andrija Puharich - Successful Treatment of Mammary Neoplasms in Mice with Gaseous Superoxide Anion and Ozone; A Theoretical Discussion of the Data

- G-16 Bill Bise - Liquid Psychic Sensors (Lecture and Demo)
- G-17 Lutie Larson - Radionic Balancing & YOU; Home, Family, Garden, Animals
- G-18 Lia Lissant - Vitally Intensified Music, ELH-HF Patterns & Demo

- G-19 Loren Parks - Simple Healing of Chronic Conditions (Lecture & Demo)
- G-20 Walter Uphoff - PK Effects Captured on Film

- G-21 Sue Wallace - Magnets and Their Use in Healing
- G-22 Benedict Arul - Cancer: A Prohomeostatic Systemal Strategy

- G-23a Sarah Hieronymus - Eloptic Energy & Plant Genetics
b T. G. Hieronymus - Eloptic Energy & Agricultural Innovations

- G-24a Edwin Skilling - Circuits & Construction of ELF-TENS Units
b Jack Houck - A Conceptual Model of Paranormal Phenomena (Spoon Bending)

- G-25a Robert Beutlich - Occult Chemistry Revisited & Reviewed -- New Data
b David Owen - Kirlian Photographs

- G-26a E. James Faubel - Subtle Energy and the Chakras
b Hugh Scott - Low Frequency Sound & ELF Radiation Effects on Health in Home From Heating Plant & Appliances

(Continued on Next Page)

- G-27a Erwin "Red" Stark - The Connections With Tomorrow
 b Joan Orion - Bio-Training/Fantasy Techniques, Analogies With Brain Research
- G-28a James Kness - Some Electrical Engineering Problems in Free Energy Technology
 b Riley Crabb - World Power Grid System & ELF Waves
- G-29a Kathleen Joyce - Psychotronics & Pythagorean/Platonic World View
 b M. Kelly & S. Lentine -Consciousness, Vibrations, & Patterns of Crystalization
- G-30a Thomas Valone - The One-Piece Faraday Generator
 b George Friebott - Suppression of Successful Oxygen Therapy of Cancer
- G-31a Toby Grotz - Spectral Analysis of the Lakhovsky Multiple Wave Oscillator from
 20Hz to 20GHz
 b Gary Fleck - Crystal Healing & Energy Attunement
- G-32a Joseph Cater - Soft Particle Physics
 b J. G. Gallimore - Psychotronics: Past, Present, and Future
- G-33 Tom Bearden - New Electromagnetics, Where the "Old Math" Took the Wrong Turn
- G-34 Preston Nichols - From Telepathy to Vacuum Tubes
- G-35 Marcel Vogel - The De la Warr Camera, Its Theory and Operation
- Tapes G-1 through G-12 (C-60) are priced @ \$5.00 each
- Tapes G-13 through G-32 (C-90) are priced @ \$6.00 each
- Tapes G-33 through G-35 (C-90 & C-30) are \$8.00 for each set
- Complete Set of Tapes: List \$204.00; Discount Price \$145
- All lectures are available on Video Cassette @ \$40.00 each
 (Except G-35, which is \$65.00)

=====

ORDERING INFORMATION

Indicate tapes or video cassettes (specify VHS or Beta) desired and
 send remittance to:

U.S. Psychotronics Association, Inc.
 3459 Montrose Avenue
 Chicago, IL 60618

Add Shipping & Handling Charges per Order of: \$1.50 U.S. & Canada
 \$6.00 Other Foreign

All foreign payments must be by dollar drafts on American banks.
